The Efficacy of Silymarin and Vitamin E in the Treatment of the Non-Alcoholic Fatty Liver Disease: A Clinical Trial

Protocol summary

Study aim

The present study is an attempt to evaluate the efficacy and safety of oral silymarin as compared to Vitamin E administered to subjects with NAFLD in a treatment period of four months.

Design

The inclusion criteria were NAFLD confirmed through abdominal ultrasonography, persistent elevation in the level of alanine aminotransferase (ALT) within the last six months for one and a half times more than the upper normal limit, fatty changes diagnosed through ultrasonography, and over 20 years of age.

Settings and conduct

This clinical trial was performed on eighty NAFLD patients who had referred to the Gastroenterology clinic of the Medical University in Yazd, Iran, from September 2014 to March 2015.

Participants/Inclusion and exclusion criteria

The inclusion criteria were NAFLD confirmed through abdominal ultrasonography, persistent elevation in the level of alanine aminotransferase (ALT) within the last six months for one and a half times more than the upper normal limit, fatty changes diagnosed through ultrasonography, and over 20 years of age. The exclusion criteria were autoimmune hepatitis, alpha-1 antitrypsin deficiency, chronic hepatitis B or C, hemochromatosis, and Wilson's disease. Patients with a history of diabetes, daily consumption ethanol, severe cardiac, pulmonary, renal, or psychological problems, positive pregnancy test, and the use of drugs such as statins,

Intervention groups

In this study , eighty NAFLD patients were assigned to two groups of forty. Those in the first group received vitamin E 400 UI /day, and those in the second group were given silymarin 140 mg bid (livergol-Goldaro Company)

Main outcome variables

They were received at the baseline and then after four months for ALT measurements and ultrasonographic evaluations of their liver.

Scientific title
The Efficacy of Silymarin and Vitamin E in the Treatment of the Non-Alcoholic Fatty Liver Disease: A Clinical Trial

Public title
Efficacy of Silymarin and Vitamin E in the Treatment fatty liver
Purpose
Treatment
Inclusion/Exclusion criteria
Inclusion criteria:
The inclusion criteria were : NAFLD confirmed through abdominal ultrasonography, persistent elevation in the level of alanine aminotransferase (ALT) within the last six months for one and a half times more than the upper normal limit, fatty changes diagnosed through ultrasonography, and over 20 years of age.
Exclusion criteria:
The exclusion criteria were autoimmune hepatitis, alpha-1 antitrypsin deficiency, chronic hepatitis B or C, hemochromatosis, and Wilson's disease. Patients with a history of diabetes, daily consumption ethanol, severe cardiac, pulmonary, renal, or psychological problems, positive pregnancy test, and the use of drugs such as statins, fibrates, anti-convulsants, NSAID, acetaminophen, warfarin, metronidazole, anti-depressants, or anti-psychotics were also excluded from the study.
Age
From **20 years** old to **60 years** old
Gender
Both

Phase
3
Groups that have been masked

Sample size
Target sample size: **80**
Actual sample size reached: **80**
Randomization (investigator's opinion)
Randomized
Randomization description
The patients were received so as to take daily doses of vitamins E (400 IU) and Silymarin 140 mg BID (with the brand name of Livergol from Goldaru Pharmaceutical Company, Iran) for four months. Additionally, they were all given consultation for standard weight-loss programs and persuaded to follow low-fat diets
Blinding (investigator's opinion)
Double blinded
Blinding description
The patients were received so as to take daily doses of vitamins E (400 IU) and Silymarin 140 mg BID (with the brand name of Livergol from Goldaru Pharmaceutical Company, Iran) for four months. Additionally, they were all given consultation for standard weight-loss programs and persuaded to follow low-fat diets

Health conditions studied

1

Description of health condition studied
Non-Alcoholic Fatty Liver Disease
ICD-10 code
K75.81
ICD-10 code description
Nonalcoholic steatohepatitis (NASH)

Primary outcomes

1

Description
ALanin aminotransferas measurements
Timepoint
They were received at the baseline and then after four months for ALT measurements
Method of measurement
autoanlizer

2

Description
ultrasonographic evaluations of their liver
Timepoint
first and four months later

Method of measurement
General Electric ultrasound device,

Secondary outcomes

empty

Intervention groups

1

Description
Intervention group 1 silymarin: Silymarin 140 mg BID (with the brand name of Livergol from Goldaru Pharmaceutical Company, Iran) for four months.Additionally, they were all given consultation for standard weight-loss programs and persuaded to follow low-fat diets (< 30 fat g/day). They were received at the baseline and then after four months for ALT measurements and ultrasonographic evaluations of their liver
Category
Treatment - Drugs

2

Description
Intervention group 2: vitamin E The patients were receivedso as to take daily doses of vitamins E (400 IU) for four months. Additionally, they were all given consultation for standard weight-loss programs and persuaded to follow low-fat diets (< 30 fat g/day). They were received at the baseline and then after four months for ALT measurements and ultrasonographic evaluations of their liver. In these evaluations, which were performed with a General Electric LOGIQ 400 CL ultrasound device.
Category
Treatment - Drugs
