Comparative study of the effectiveness of plant extract combinations from three herbs including Salvia limbata, Equisetum Arvense and Myrtus communis spray on the decrease of the amount of sweating among healthy and mature women.

Protocol summary

Study aim

The purpose of this study, which was carried out on triple-blind clinical trial, is to investigate the antiperspirant effect of plant extract combinations from three herbs of Salvia limbata, Equisetum Arvense and Myrtus communis spray

Design

The clinical trial has a control group whit non-randomized Triple Blind parallel groups.

Settings and conduct

The study group consisted of females between 18 and 40 years old. Participants entered the study consciously after completing a briefing on the research objectives and how to complete the questionnaires and forms, as well as how to properly use the spray, and after filling out the consent form. This study was conducted using Triple Blind method (lack of knowledge of the participants the researcher and statistical consultant on the allocation of study groups until the end of data analysis). For each of the 24 participants in the study, consisted of two treatment group on the axillary region were inserted pads with hydroalcoholic extract of Salvia limbata, Equisetum Arvense and Myrtus communis in a mixture form in 5% ethano and the individuals were given of physical activity in the sports club of the dormitory, and then, after 2 hours the pads were collected from the axillary region and redistributed.

Participants/Inclusion and exclusion criteria

18-40 year-old women: No history of allergy to natural anti-perspirants and natural ingredients, cutaneous lesion in axillary region, history of metabolic disease and no use of anti-histamine medications at the time of the study.

Intervention groups

The pads soaked in the extracts of the said plants was pasted in one area of the right or left axillary and a

control pad (placebo) was used on the other side.

Main outcome variables

Perspiration

Scientific title

Comparative study of the effectiveness of plant extract combinations from three herbs including Salvia limbata, Equisetum Arvense and Myrtus communis spray on the decrease of the amount of sweating among healthy and mature women.

Public title

The study of antiperspirant effect of plant extract combinations from three herbs of Salvia limbata, Equisetum Arvense and Myrtus communis spray.

Purpose

Treatment

Inclusion/Exclusion criteria**Inclusion criteria:**

No history of hypersensitivity to natural anti-perspiration substances and compounds. No cutaneous lesion in axillary region. No history of metabolic disease Not taking antihistamine drugs while studying

Exclusion criteria:

Use of antiperspirant and anticholinergic drugs People with thyroid or metabolic diseases Sensitivity to natural and skin products

AgeFrom **18 years** old to **40 years** old**Gender**

Female
