

Clinical Trial Protocol

Iranian Registry of Clinical Trials

16 Sep 2026

Effect of synbiotic supplementation on disease activity, Th17 cells frequency, IL-23/IL-17 axis expression and serum levels of IL-17 and IL-23 in patients with ankylosing spondylitis

Protocol summary

Study aim

Determining the effect of synbiotic supplement on disease activity, Th17 frequency, IL-23/IL-17 axis expression and serum IL-17 and IL-23 levels in ankylosing spondylitis patients

Design

Clinical trial with control group, parallel groups, double blind, randomized

Settings and conduct

48 AS patients referred to rheumatology clinic are selected based on inclusion and exclusion criteria. Patients will be randomly divided into two groups receiving synbiotic (24) and receiving placebo (24). The study groups will receive one synbiotic capsule (zist-takhmir company) or placebo per day for 3 months. Participants and outcome assessors will be blind.

Participants/Inclusion and exclusion criteria

Inclusion criteria: willing to participate; age range 20-60 years; diagnosis of AS by a rheumatologist Exclusion criteria: using nutritional and antioxidant supplements during one month prior to the study; pregnancy and lactation; history of having other autoimmune diseases; history of having diabetes and inflammatory bowel diseases; gastrointestinal system infections; recurrence of disease during the study

Intervention groups

Intervention group: receiving one synbiotic capsule per day for 3 months Placebo group: receiving one placebo capsule per day for 3 months

Main outcome variables

disease activity; Th17 cells frequency; IL-23/IL-17 axis expression; serum IL-17 and IL-23 levels

Scientific title

Effect of synbiotic supplementation on disease activity, Th17 cells frequency, IL-23/IL-17 axis expression and

serum levels of IL-17 and IL-23 in patients with ankylosing spondylitis	
Public title	Effect of synbiotic supplementation in ankylosing spondylitis
Purpose	Treatment
Inclusion/Exclusion criteria	Inclusion criteria: Willing to participate Age range 20-60 years AS diagnosis by rheumatologist Exclusion criteria: Taking nutritional and antioxidant supplements one month prior to study Pregnancy and lactation History of other autoimmune diseases History of diabetes mellitus, IBD Gastrointestinal infection and other chronic diseases The recurrence of the disease during the study Unwilling to continue the study
Age	From 20 years old to 60 years old
Gender	Both
Phase	N/A
Groups that have been masked	• Participant • Care provider • Investigator
Sample size	Target sample size: 48
Randomization (investigator's opinion)	Randomized
Randomization description	The selected samples will be randomly (block randomization) divided into two groups: synbiotic and placebo.
Blinding (investigator's opinion)	Double blinded
Blinding description	Participants, care provider and investigator will be blind in this study. The way of participant blindness is that he will receive and use a certain number of drugs in an unnamed and labeled envelope. The way of care provider blindness is that after making diagnosis of ankylosing spondylitis to his patient and notifying his secretary, randomly gives one of the envelopes to the patient. The way of researcher's blindness is that he will not be present in the filling envelopes and selecting them by secretary.
Placebo	Used
Assignment	Parallel
Other design features	
Secondary Ids	empty

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: 1 synbiotic capsule fami lact per day for 3 months from Zist Takhmir factory capsules include: 10 9 CFU bacteria namely Lactobacillus casei, Lactobacillus Ramnosis, Lactobacillus acidophilus, Lactobacillus bolgaricus, streptococcus thermophilus, bifidobacterium Langom and froctooligosacharide (FOS) prebiotic

Category

Treatment - Other

2

Description

Placebo group: 1 placebo capsule per day including corn starch from Zist Takhmir factory for 3 months

Category

Placebo
