Investigating the effect of Stretching exercises on back pain and quality of sleep among pregnant women

Protocol summary

Study aim

the effect of Stretching exercises on Low Back Pain and Sleep Quality in Pregnant Women Referred to Kowsar Teaching Hospital

Design

A randomized controlled clinical trial with a single group (Yoga Hata) randomly assigned without placement

Settings and conduct

Intervention in this study involves performing a type of pregnancy yoga program that is referred to the Kosar Hospital clinic after being selected by the researchers as a study and the yoga program by a trained yoga instructor with an international degree and an undergraduate degree. A midwife with a 7-year experience teaching yoga to pregnant mothers runs a specialized yoga club. For the intervention group, the yoga program includes Hata Yoga style and includes physical movements (50 minutes), meditation (15 minutes), and breathing and relaxation exercises (10 minutes).

Participants/Inclusion and exclusion criteria

log in: 1. Having informed consent to participate in the study. 2. Age group 18 to 35 years. 3. Having a normal pregnancy according to the written diagnosis of a specialist gynecologist (not having ivf for pregnancy, no underlying illness in the family, having normal weight). 4. First pregnancy and single pregnancy. 5. Ability to read and write. 6. Having a normal BMI (between 19/8 and 25). 7. Pregnancy age 24 to 28 weeks. Not logged in: 1. History of orthopedic surgery. 2. History of lumbar disc according to medical records. 3. Having experience in yoga class or regular exercise (Pilates, Tai Chi). 4. During Yoga Exercises If the fetus becomes difficult, the delivery of choice is by caesarean section or by more than 2 sessions of yoga class absent.

Intervention groups

Pregnant women in this group will start their first yoga session of pregnancy from 26 to 28 weeks of gestation and up to 37 minutes of gestation twice a week for 75

minutes.

Main outcome variables

Low back pain and sleep quality and pregnancy anxiety

Groups that have been masked
No information

Sample size
Target sample size: **60**

Randomization (investigator's opinion)
Randomized

Randomization description
They will be selected by random allocation without assigning people. In this way, every pregnant mother who is eligible to study will be placed in a binary blue orb (hatha yoga) of 33, a red (control) of 33, and the pregnant mother will remove one orb and enter the orb. Hatha will be yoga or control.

Intervention groups

1

Description

Intervention group: The intervention in this study involves performing a kind of yoga program during pregnancy. Pregnant women referred to the Kowsar Hospital Clinic are selected by the researchers after

being eligible for the study. The yoga program is run by a trained yoga instructor with an international degree in yoga and a bachelor's degree in midwifery with a 7-year experience of teaching pregnant mothers about yoga. For the intervention group, the yoga program will include Hata Yoga style and the yoga program will include physical movements (50 minutes), meditation (15 minutes) and breathing and relaxation exercises (10 minutes), based on several studies of this type of yoga. Participants will also begin their first pregnancy yoga session from week 26 to 28 of gestation and will complete two yoga sessions for the next 75 minutes during the 37th week of pregnancy.

Category

Rehabilitation

2

Description

Control group: The pregnant mother should not receive any intervention. The usual prenatal care that all pregnant women receive will be provided.
