The Effect of Community Re-entry Program on Quality of Life and Social functioning in People with Schizophrenia

Protocol summary

Study aim

the effectiveness of a community Re-entry program on quality of life and social functioning in people with schizophrenia.

Design

The present study is a quasi-experimental study with pre-test and post-test design which was performed on all schizophrenia patients admitted to rehabilitation centers in Tehran. For this purpose, 40 patients with schizophrenia admitted to Tolue Rehabilitation Center were selected by convenience sampling and were randomly assigned to experimental (n = 20) and control (n = 20) groups. At the beginning of the study, the two groups were matched for age and education variables.

Settings and conduct

The research group was trained by the researcher for two months, two sessions per week for 45 minutes in each session and a total of 16 sessions in the Tolue Rehabilitation Center. The control group continued their usual treatment

Participants/Inclusion and exclusion criteria

Inclusion criteria included psychiatrist's confirmation of diagnosis of schizophrenia with DSM 5 diagnostic criteria, at least two years after onset of illness, history of recurrence of symptoms, psychotic attacks and hospitalization, willingness to participate in research, ability to learn, and appropriate responses to explanations. It will be given.

Intervention groups

Experimental group received two sessions per week for a total of 16 sessions per week for 2 months

Main outcome variables

quality of life, social functioning

Scientific title

The Effect of Community Re-entry Program on Quality of Life and Social functioning in People with Schizophrenia

Public title

The Effect of Community Re-entry Program on Quality of Life and Social functioning in People with Schizophrenia	
Purpose	Prevention
Inclusion/Exclusion criteria	
Inclusion criteria:	The psychiatrist confirmed the diagnosis of schizophrenia with DSM 5 diagnostic criteria at least two years after the onset of the disease a history of recurrence of symptoms, psychotic attacks and hospitalization ability to learn, and appropriate responses to the explanations. willingness to participate in research Participants must be men
Exclusion criteria:	Any psychiatric disorder other than schizophrenia The acute phase of the disease The presence of deafness and blindness and sensory disorders that cannot be remedied by the means. Get electric shock in the last 6 months Unwillingness to continue the evaluation Being a woman
Age	No age limit
Gender	Male
Phase	N/A
Groups that have been masked	No information
Sample size	Target sample size: 40 Actual sample size reached: 40
Randomization (investigator's opinion)	Randomized
Randomization description	Forty patients admitted to Tolue Rehabilitation Center who met the inclusion criteria were selected by convenience sampling and were randomly(balloting) assigned to experimental (n = 20) and control (n = 20) groups.
Blinding (investigator's opinion)	Not blinded
Blinding description	
Placebo	Not used
Assignment	Other
Other design features	This study investigates the effectiveness of rehabilitation programs on the prevention of psychiatric relapse in patients with schizophrenia and the management of treatment by patients themselves.
