The effect of virtual self-care education on quality of life in HIV positive patients

Protocol summary

Study aim

Determining the Effectiveness of Self-Care Training with Network Method Virtual on the quality of life of HIV positive patients in Tehran

Design

40 subjects in control group and 40 patients in intervention group will be divided into quasi-random method. The grouping will be based on the file number. It will first draw between the couple's number and the individual. The first group will be intervention group and the second group will be control group.

Settings and conduct

The study population was HIV positive patients referred to Behavioral Disease Counseling Centers in Tehran. 5 Behavioral Counseling Centers in Tehran will be selected. The study is single-blind and the participants are blinded.

Participants/Inclusion and exclusion criteria

Entry requirement: 1. A definitive diagnosis of HIV and having a file at the counseling center 2. Not having severe cognitive impairments such as mental retardation 3. Access to smartphone and internet 4. Age range from 18 to 45 years 5. Having informed consent 6. Minimum literacy skills 7. No addiction 8. No chronic diseases such as hepatitis, tuberculosis, etc.

Intervention groups

The intervention and control groups will complete the MQOL-HIV questionnaire. The intervention group will then receive audio and text files of virtual self-care skills training. Training will be for 4 weeks. The questionnaire will be completed again by the participants 2 weeks after the training and the information will be analyzed.

Main outcome variables

Quality of life of HIV-positive patient

Description of health condition studied

HIV

ICD-10 code

B20

ICD-10 code description

Human immunodeficiency virus [HIV] disease

Primary outcomes

1

Description

The quality of life of HIV-positive patients is measured by the standard MQOL-HIV questionnaire.

Timepoint

Questionnaires will be completed before intervention and 2 weeks after training.

Method of measurement

MQOL-HIV

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: 40 HIV positive patients will complete the questionnaire. The group will then receive audio and text files for 4 weeks of self-care virtual training. The questionnaire will be completed again by this group within 2 weeks of completion of training.

Category

N/A

2

Description

Control group: 40 HIV-positive patients who did not receive education. This group will also be provided with training to follow ethics.
