Comparative study of the rate of recovery and postoperative complications of two mucopexy surgical methods with and without Doppler Guided Hemorrhoidal Artery Ligation (DG-HAL) in patients with grade 3 and 4 hemorrhoids

Protocol summary

Study aim

We compare the rate of recovery and postoperative complications in patients with grade 3 and 4 hemorrhoids in two mucopexy surgical methods with and without Doppler Guided Hemorrhoidal Artery Ligation(DG-HAL).

Design

This is a Randomized Clinical Trial study. The intervention group includes patients undergoing mucopexy with DG-HAL and the control group are patients undergoing mucopexy without DG-HAL. Sample size includes 36 patients, 18 in each parallel group. Patients are divided into two groups of intervention and control by randomization of allocating 5-digit special code to each individual. The study is single-blinded and only patients (participants) are not aware of the mucopexy surgical methods. The trial phase is 2-3.

Settings and conduct

Study Setting: General Surgery, Colorectal Surgery,
Study Location: Firoozgar Hospital, Tehran, Study
Method: Interventional (clinical trial), Single-Blinded: only the patients (participants) are blinded.

Participants/Inclusion and exclusion criteria

Inclusion Criteria: Patients with diagnosis of Grade 3 and 4 hemorrhoids. Exclusion Criteria: Patients with diagnosis of Grade 1 and 2 hemorrhoids, Patients with underlying disease such as diabetes and hypertension, Patients with a history of hemorrhoidal surgery, Patients with a history of rectal surgery.

Intervention groups

Intervention group includes patients undergoing mucopexy operation with DG-HAL,The control group includes patients undergoing mucopexy operation without DG-HAL.

Main outcome variables

Recovery rate; postoperative complications.

Scientific title

Comparative study of the rate of recovery and postoperative complications of two mucopexy surgical methods with and without Doppler Guided Hemorrhoidal Artery Ligation (DG-HAL) in patients with grade 3 and 4 hemorrhoids

Public title

The effect of mucopexy surgical method on the incidence of postoperative complications.

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Patients referred to Surgery Clinic of Firoozgar Hospital for diagnosis of grade 3 and 4 hemorrhoids.

Exclusion criteria:

Patients with diagnosis of grade 1 and 2 hemorrhoids
Patients with underlying disease such as diabetes and hypertension
Patients with a history of hemorrhoidal surgery
Patients with a history of rectal surgery

Age

No age limit

Gender

Both

Phase

2-3

Sample size

Target sample size: 36

Randomization (investigator's opinion)

Randomized

Randomization description

Method of randomization in this study is Simple and unit of randomization is individual. No stratified randomization is used. Sealed envelopes are used as the tool in randomization. The random sequence is built by envelopes shuffling. In allocation concealment we consider a 5-digit code for each envelope and if the third number is even the patient is in case group. If the third number is odd the patient is in control group.

Blinding (investigator's opinion)

Single blinded

Blinding description

All of the participants are aware of their participation in this study and have announced their consent forms. Also, this study has the permission from ethical committee of university. the study is single-blinded, and only the participants are unaware of which of the two mucopexy surgical methods with or without DG-HAL used to treat grade 3 and 4 hemorrhoids. Also, a checklist is provided for each patient, including name, age, sex, height, weight, BMI and demographic characteristics, as well as hemorrhoid grade. These checklists with surgical procedure name coded (mucopexy with DG-HAL) as even third digit in 5-digit code and (mucopexy without DG-HAL) as odd third digit in 5-digit code randomly given to the patients before their operation.

Health conditions studied

1

Description of health condition studied

Grade 3 and 4 Hemorrhoids, Doppler Guided Hemorrhoidal Artery Ligation, Mucopexy with DG-HAL, Mucopexy without DG-HAL, General Surgery, Colorectal Surgery, Anorectal Diseases

ICD-10 code

K64

ICD-10 code description

Hemorrhoids and perianal venous thrombosis

2

Description of health condition studied

Grade 3 and 4 Hemorrhoids, Mucopexy with DG-HAL, Mucopexy without DG-HAL, General Surgery, Colorectal Surgery, Anorectal Diseases

ICD-10 code

K64.3

ICD-10 code description

Fourth degree hemorrhoids

Primary outcomes

1

Description

The incidence percentage of postoperative complications

of mucopexy with and without DG-HAL in patients with grade 3 and 4 hemorrhoids

Timepoint

One, three and six months after operation

Method of measurement

According to checklists and evidence of patients' history and physical examination in follow-up visits for presence or absence of pain, signs of infection, bleeding, gas incontinence, stool incontinence, anal stenosis, fistula, prolapse and hemorrhoid recurrence

Secondary outcomes

1

Description

The rate of recovery

Timepoint

One, three and six months after operation

Method of measurement

Checklists and evidence of patients' history and physical examination in follow-up visits for presence or absence of pain, signs of infection, bleeding, gas incontinence, stool incontinence, anal stenosis, fistula, prolapse, and hemorrhoid recurrence

Intervention groups

1

Description

Intervention group: includes patients undergoing mucopexy with DG-HAL. These patients have grade 3 and 4 hemorrhoids requiring surgical intervention. DG-HAL mucopexy surgery is performed by blocking hemorrhagic artery and hemorrhoid repair using Doppler device during surgery.

Category

Treatment - Surgery

2

Description

Control group: includes patients undergoing mucopexy without DG-HAL. These patients have grade 3 and 4 hemorrhoids requiring surgical intervention. mucopexy surgery without DG-HAL is performed without the use of a Doppler device during hemorrhoid repair.

Category

Treatment - Surgery

Title and more details about the data/document

All data can potentially be shared after making people unrecognizable.

When the data will become available and for how long

starting of accessibility will be 6 months after publication

To whom data/document is available

only available for people working in academic institutions

Under which criteria data/document could be used

- researchers - people working in academic institutions - data could not be used in other studies. - data is available for elucidating the results of this study.

From where data/document is obtainable

contact responsible person: dr. Sara Sohrabi, academic e-mail address: sohrabi.s@tak.iuums.ac.ir , address: Firoozgar Hospital, Beh Afarin Ave., Valiasr Square, Tehran second responsible person: dr. Mahdi AlemRajabi , Assistant professor, e-mail address: mahdialemlrajabi@gmail.com

What processes are involved for a request to access data/document

researcher information including name, address, telephone number and e-mail address - researcher CV/resume - Sending a request letter to responsible person for accessing data - Approval letter from academic institution
