Iranian Registry of Clinical Trials

13 Jul 2026

Effect of variability of central venous pressure values to prevent atrial fibrillation after coronary by pass grafting

Protocol summary

Study aim

Effect of variability of central venous pressure values to prevent atrial fibrillation after coronary by pass grafting

Design

A Non-randomized clinical trial with parallel groups. 150 patients have divided into intervention 3 groups A, B and C.

Settings and conduct

The study population consisted of patients who referred to Ayatollah Rouhani Hospital in Babol. Group 1: Normal pressure group (8 to 12 mmHg) Group 2: Low pressure group (less than 8), Group 3: High pressure group (greater than 12), During hospitalization with central venous pressure treatment, we normalized central venous pressure in all 3 groups. In the low pressure group of fluid delivery and, if necessary, vasopressor, and the high-pressure group performed fluid restriction and Furosemide injection.

Participants/Inclusion and exclusion criteria

Inclusion Criteria: Patients undergoing isolated coronary artery bypass graft surgery Exclusion Criteria: History of atrial fibrillation Renal failure with plasma creatinine greater than 2 mg/dl, Malignant or inflammatory diseases, Mixed cardiac operations including valve replacement, Active hepatic-biliary diseases

Intervention groups

Group 1: Normal pressure group (8 to 12 mmHg) Group 2: Low pressure group (less than 8) Group 3: High pressure group (greater than 12) During hospitalization with central venous pressure treatment, we normalized central venous pressure in all 3 groups. In the low pressure group of fluid delivery and, if necessary, vasopressor, and the high-pressure group performed fluid restriction and Furosemide injection.

Main outcome variables

Atrial fibrillation after Coronary Artery Bypass Graft surgery

Scientific title

Effect of variability of central venous pressure values to prevent atrial fibrillation after coronary by pass grafting

Public title
Effect of variability of central venous pressure values to prevent atrial fibrillation

Purpose
Treatment

Inclusion/Exclusion criteria
Inclusion criteria:
Patients undergoing isolated coronary artery bypass graft surgery
Exclusion criteria:
History of atrial fibrillation Renal failure with plasma creatinine greater than 2 mg/dl Malignant or inflammatory diseases Mixed cardiac operations including valve replacement Active hepatic-biliary diseases

Age
No age limit

Gender
Both

Phase
N/A

Groups that have been masked
No information

Sample size
Target sample size: **150**
Actual sample size reached: **150**

Randomization (investigator's opinion)

Health conditions studied

1

Description of health condition studied

Atrial fibrillation

ICD-10 code

I48

ICD-10 code description

Atrial fibrillation and flutter

Primary outcomes

1

Description

Atrial fibrillation after Coronary Artery Bypass Graft surgery

Timepoint

During 5 days after operation

Method of measurement

ECG monitoring

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group1: Low pressure group (less than 8),Treatment of central venous pressure In the low pressure group by giving fluid and vasopressor if necessary.

Category

Prevention

2

Description

Intervention group2 : High pressure group (greater than 12), Treatment of central venous pressure In the high-pressure group by limiting fluids and giving 40 mg of Furosemide.

Category

Prevention

3

Description

Control group: Normal pressure group (8 to 12 mmHg)

Category

Prevention
