Effect of listening to music versus no listening to music on the results of non-stress test in pregnant women: a randomized clinical trial

Protocol summary

Study aim

To assess the effect of listening to music versus no listening to music on the results of non-stress test in pregnant women

Design

This is a randomized clinical trial, in which 160 eligible pregnant women will be randomly assigned to the intervention and control groups

Settings and conduct

The eligible pregnant women who will refer to Fatemieh Hospital in Hamadan City during the study period will be enrolled in the trial and will be randomly assigned to the intervention and control groups through the drawing of lots.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Age of 18 to 35 years, Gestational age 37 to 40 weeks, Singleton, First pregnancy, Low fetal motions
Exclusion criteria: Pregnancy complications, Congenital anomalies of the fetus, Smoking, Taking sedative or narcotic or anti-anxiety drugs, Hearing disorder

Intervention groups

Intervention group: Routine prenatal care as well as listening to the wordless Iranian music called Roohafza generated by Shahram Tavakoli with the IRIB Symphony once for 30 minutes using headphone in a silent room
Control group: Just routine prenatal care

Main outcome variables

Primary outcome: The number of fetal heart rate, The number of fetal movement

Sample size
Target sample size: **160**

Randomization (investigator's opinion)
Randomized

Randomization description
Random assignment of the patients to the intervention and control groups through the drawing of lots. To do this, we prepare two sheets and write "intervention" on one sheet and "control" on another. Then, by referring each patient, one of the sheets will be randomly taken and the patient will be assigned to the intervention or control group.

Blinding (investigator's opinion)
Not blinded
