The effectiveness of a mobile phone education based on self-efficacy on adherence to Dash diet among patient with high blood pressure

Protocol summary

Study aim

The effect of educational intervention based on mobile app self-efficacy model on adherence to Dash diet in hypertensive patients referred to Ahwaz health centers

Design

Samples were randomly divided into intervention and control groups. There were 44 subjects in each group

Settings and conduct

This study is a quasi-experimental interventional study that will be conducted among people with hypertension in Ahwaz health centers.

Participants/Inclusion and exclusion criteria

log in: Having a BMI > 25 or a BMI > 30 Age over 25 years Having an Android smart phone to get your app and SMS High blood pressure 130 to 139 for systolic and 80 to 89 for diastolic Exit: Changing the type of blood pressure medication Hospitalization and relocation Participate in other study simultaneously

Intervention groups

DASH diet training for hypertensive individuals in the intervention group is based on the mobile app. The intervention duration is three months.

Main outcome variables

At the beginning and end of the study, patients' blood pressure and self-efficacy are measured

Description

Efficacy

Timepoint

Before intervention and three months after intervention

Method of measurement

Score obtained from self-efficacy questionnaire

Intervention groups

1

Description

Intervention group: Intervention group: General questionnaire, physical activity questionnaire and three day food registration form for food intake information and a researcher-made questionnaire based on self-efficacy of the study population will be completed before the beginning of the intervention. DASH diet training is provided by patients through the mobile app. At the end of the three-month intervention period, post-test, self-efficacy questionnaire, and three-day meal registration form will be completed again.
