Health conditions studied

1

Description of health condition studied

HIV/AIDS

ICD-10 code

B20

ICD-10 code description

Human immunodeficiency virus [HIV] disease resulting in infectious and parasitic diseases

Primary outcomes

1

Description

CD4 level

Timepoint

Before intervention and 4 months after intervention

Method of measurement

Laboratory tests

Secondary outcomes

1

Description

Sleep quality

Timepoint

Before intervention and 4 months after intervention

Method of measurement

Sleep Quality questionnaire (PSQI)

2

Description

Anxiety and depression

Timepoint

Before intervention and 4 months after intervention

Method of measurement

Anxiety and Depression questionnaire (HAD)

3

Description

Body composition

Timepoint

Before intervention and 4 months after intervention

Method of measurement

Body composition device

4

Description

Quality of life

Timepoint

Before intervention and 4 months after intervention

Method of measurement

Quality of life questionnaire (SF-36)

5

Description

Clinical symptoms

Timepoint

Before intervention and 4 months after intervention

Method of measurement

Clinical symptoms checklist (MSCL & SCL90-R)

Intervention groups**1****Description**

Intervention group: In this clinical trial, after getting consent of participants, we will conduct interviews based on questionnaires and following by that body composition of participants will be measured by body composition machine. These participants will be divided in three groups randomly. People in first group with resistance training, will do exercises with emphasis on big muscles three times a week for four months. The other group with recreational sport activities will do activities such as Ping-Pong, foosball and throwing darts three times a week based on their interests. At the end of four months, all the participants in three groups will be assessed body composition, CD4 level and Psychological Health.
