The effects of textured insoles on the balance of older people with callus formation under the foot: a controlled study

Protocol summary

Study aim

To investigate the effects of textured insoles on the balance of older people with callus formation under the foot

Design

Clinical trial, parallel group design, with 30 participants

Settings and conduct

Participants were recruited from outpatient clinic in Alzahra hospital, Isfahan, Iran through a convenience sampling method.

Participants/Inclusion and exclusion criteria

Inclusion criteria were age over 60 years; Body mass index between 20 to 30; People with foot callus (grade 2 and 3); and the history of a fall in the last six months. Exclusion criteria included neurological and musculoskeletal conditions which affect the balance, vestibular dysfunction, and diabetes melitus.

Intervention groups

Interventions included textured and placebo insoles. The Placebo was a flat insole covered with a printed film only illustrated the textured pattern. A flat insole without any texture was used as the control condition. This insole has 3mm thickness the same as international insoles to occupy the same room in the shoes.

Main outcome variables

The primary outcome measures were the upright postural stability, ankle joint position sense, and timed-up and go test.

Scientific title

The effects of textured insoles on the balance of older people with callus formation under the foot: a controlled study

Public title

Shoe inserts for elders with callus under the foot

Purpose

Supportive

Inclusion/Exclusion criteria

Inclusion criteria:

Age over 60 years
Body mass index between 20 to 30
People with foot callus (grade 2 and 3)
People with the history of two falls in the last six months

Exclusion criteria:

People with neurological conditions (e.g. Parkinson's disease and multiple sclerosis)
Musculoskeletal conditions affect the balance
People with vestibular dysfunction
Having diabetes melitus

Age

From **60 years** old

Gender

Both

Health conditions studied**1****Description of health condition studied**

Aging

ICD-10 code

L84

ICD-10 code description

Corns and callosities

Primary outcomes**1****Description**

Ankle Joint Position sense (proprioception)

Timepoint

All intervention was allocated in a straight forward session and outcomes were measured.

Method of measurement

Ankle proprioception was measured using perception of the inclination whilst participants stood over an adjustable slope box with closed eyes.

2**Description**

The mean velocity of center of pressure

Timepoint

All intervention was allocated in a straight forward session and outcomes were measured.

Method of measurement

Participant's Postural stability on the platform were be measured with mean velocity of CoP excursion in open and closed eye conditions. The duration of each test was 60 seconds. Each tests repeated 3 times and average reported.

3**Description**

Timed up and go test

Timepoint

All intervention was allocated in a straight forward session and outcomes were measured.

Method of measurement

The time required to get up from a chair, walking 3 meters, turning back, and sitting on the chair was recorded.

Secondary outcomes

empty

Intervention groups**1****Description**

Intervention group: Using textured insole made with PVC that was in direct touch with the skin of the sole. This insole had 5mm diameter, 3mm height, and 10mm peak-to-peak distance circular projections.

Category

2

Description

Intervention group: Placebo insole. The pattern of the projections on the textured insole was scanned and printed on a PVC (banner) film. This printed film was attached on a plain/flat insole with 3mm thickness then used in the study.

Category

Placebo

3

Description

Control group: A flat insole without any texture. This insole has 3mm thickness the same as international insoles to occupy the same room in the shoes.

Title and more details about the data/document

The study data (excluding the personal details) can be shared with other researchers or systematic reviewers.

When the data will become available and for how long

No time limit is set.

To whom data/document is available

No specific limitation is considered.

Under which criteria data/document could be used

No terms and conditions is considered for sharing the data.

From where data/document is obtainable

People can send their request to the correspondence and obtain the data.

What processes are involved for a request to access data/document

Request can be sent through an email.
