

Clinical Trial Protocol

Iranian Registry of Clinical Trials

15 Jul 2026

In vivo evaluation of vaginal suppository containing Corianderum sativum essential oil effect on the treatment of candidiasis infection

Protocol summary

Study aim

Evaluation of the effectiveness of vaginal suppository containing coriander seed essential oil in comparison with clotrimazole suppository in the treatment of vaginal candidiasis

Design

This study is a single blind randomized parallel clinical trial

Settings and conduct

This study was performed in Imam Ali Educational and Medical Clinic in Shahrekord

Participants/Inclusion and exclusion criteria

Inclusion criteria: women aged 18 to 50 years,. Marriage, lack of sensitivity to the plant compounds of coriander seeds, lack of sensitivity to clotrimazole, signing the consent form to participate in the study Exclusion criteria: pregnancy and lactation, menopause, underlying diseases, forgetting a dose or more, patient unwillingness to continue treatment, menstruation during the study, abnormal uterine bleeding

Intervention groups

1. Coriander seed suppository 2. Clotrimazole suppository

Main outcome variables

1) Symptoms of candidal vaginitis (including: itching, burning, vaginal redness, inflammation, vaginal discharge) 2) Symptoms of candidal vaginitis (including: vaginal erythema, white cheesy discharge and inflammation) 3) Possible side effects of drugs in both groups Therapies are compared.

Scientific title

In vivo evaluation of vaginal suppository containing Corianderum sativum essential oil effect on the treatment of candidiasis infection

Public title

In vivo evaluation of vaginal suppository containing corianderum sativum essential oil effect on the treatment of candidiasis infection

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:
age 18-50
Diagnosis of candidiasis infection
Signature of consent

Exclusion criteria:
Pregnancy, lactation, menopause, underlying diseases
Sex during the study
Forget a dose or more of medication
Allergy to clotrimazole or coriander suppository
The patient's unwillingness to continue treatment

Age
From **18 years** old to **50 years** old

Gender
Female

Phase
1

Groups that have been masked

- Participant
- Care provider
- Data analyser

Sample size
Target sample size: **60**
Actual sample size reached: **60**

Randomization (investigator's opinion)
N/A

Randomization description

Blinding (investigator's opinion)
Single blinded

Blinding description
Vaginal suppositories of coriander seeds were made by the researcher and placed in aluminum foils individually, and clotrimazole suppositories were removed from the main cover and placed in the foil, and everyone except the researcher was unaware of the drug composition.

Health conditions studied

1

Description of health condition studied

candidiasis vulvovaginit

ICD-10 code

N77.1

ICD-10 code description

Vaginitis, vulvitis and vulvovaginitis in diseases classified elsewhere

Primary outcomes

1

Description

itching

Timepoint

Start of study - 7 days after the start of the study

Method of measurement

Questionnaire three-Complete a checklist to evaluate the symptoms of candidal vaginitis and then compare the frequency of symptoms of candidal vaginitis within and between the two treatment groups.

2

Description

discharge

Timepoint

Beginning of the study - 7 days after the start of the study

Method of measurement

Questionnaire three

3

Description

inflammation

Timepoint

Beginning of the study - 7 days after the start of the study

Method of measurement

Questionnaire three

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: consists of 30 people who each

receive a 2 g vaginal suppository containing 0.1 cc of coriander seed essential oil every night for seven nights. This suppository is based on polyethylene glycol 1000 and 4000 at the rate of 75% and 25% in Shahrekord University of Medical Sciences. Participants were explained how to use the drug at the beginning of the study.

Category

Treatment - Drugs

2

Description

Control group: including 30 people who each receive a 500 mg clotrimazole vaginal suppository every night for seven nights

Category

Treatment - Drugs
