

Clinical Trial Protocol

Iranian Registry of Clinical Trials

04 Jun 2026

Clinical trial of the effect of spirulina supplementation compared with the placebo on insulin resistance, inflammatory factors, biomarkers of oxidative stress and cognitive function in patients with Alzheimer's disease

Protocol summary

Study aim

The aim of this study is to determine the effects of spirulina supplementation on insulin resistance, inflammatory factors, biomarkers of oxidative stress and cognitive function in patients with Alzheimer's disease.

Design

Parallel double-blind (both patients and researchers) randomized controlled clinical trial. Random assignment will be done by the use of computer-generated random numbers.

Settings and conduct

Madar and Shayestegan Welfare Organizations (Shahrekord, Iran).

Participants/Inclusion and exclusion criteria

Inclusion criteria: Patients with Alzheimer's disease and aged 55 to 100 years will be included in this study.
Exclusion criteria: Patients with metabolic syndrome, diabetes, cardiovascular disease, chronic infections, consuming spirulina supplements within 8 weeks prior to the study and taking antioxidants supplements will be excluded.

Intervention groups

Patients will be assigned to receive spirulina supplements (n=30) and placebo (n=30).

Main outcome variables

Insulin resistance, inflammatory factors and biomarkers of oxidative stress, and cognitive function

Scientific title

Clinical trial of the effect of spirulina supplementation compared with the placebo on insulin resistance, inflammatory factors, biomarkers of oxidative stress and cognitive function in patients with Alzheimer's disease

Public title

Effect of spirulina supplementation in treatment of patients with Alzheimer's disease

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Patients with Alzheimer's disease Individuals aged 55 to 90 years

Exclusion criteria:

Patients with metabolic syndrome Patients with cardiovascular disease Patients with chronic infections Consuming spirulina supplements within 8 weeks prior to the study Taking antioxidants supplements Patients with diabetes

Age

From **55 years** old to **90 years** old

Gender

Both

Phase

3

Groups that have been masked

- Participant
- Investigator
- Outcome assessor

Sample size

Target sample size: **60**

Randomization (investigator's opinion)

Randomized

Randomization description

At study baseline, participants based on balanced blocked randomization will be allocated into two groups to take either spirulina supplements (n = 30) or placebo (n = 30). Randomization will be done by the use of computer-generated random numbers.

Blinding (investigator's opinion)

Double blinded

Blinding description

Randomization and allocation will be concealed from the researchers and participants until the final analyses are completed. Another person who is not involved in the trial and not aware of random sequences, will be assigned the participants to the numbered bottles of capsules.
