The Effect of Sustained Natural Apophyseal Glide with and Without Neurodynamics in the Management of Patient with Cervical Radiculopathy

Protocol summary

Study aim

- To identify the Effect of Sustained Natural Apophyseal Glide With And Without Neurodynamics In The Management Of Patient With Cervical Radiculopathy.

Design

Interventional study Randomized Clinical Trial Non probability convenience sampling technique

Settings and conduct

Sample size will be 44 individuals (22 each group)
Conducted in time duration of 6 months

Participants/Inclusion and exclusion criteria

Inclusion Criteria 1. Patients having Age 22-40 years 2. Both genders 3. Patient availability and cooperation during treatment 4. Patients with positive result of following tests: Spurling test, ULNT-1, neck distraction and ipsilateral cervical rotation test. Exclusion Criteria 1. Patients having negative one of the following tests: Spurling test, ULNT-1, neck distraction and ipsilateral cervical rotation test. 2. Patients with accessory Systemic Musculoskeletal Dysfunction 3. Patients having symptoms of Vertebral Artery Insufficiency. 4. Patients not willing to participate or to follow up treatment plan.

Intervention groups

There will be two groups of equal number of individuals diagnosed with cervical radiculopathy after confirmation of Manual tests. Group A Control group will receive Sustained Natural Apophyseal Glide only. Patients in this group will receive a baseline treatment that is heating pad for 15 minutes before the treatment. Group B. This group will receive Sustained Natural Apophyseal Glide along with Neurodynamics. Patients in this group will receive a baseline treatment that is heating pad for 15 minutes before the treatment.

Main outcome variables

Correcting Cervical Radiculopathy

Sample size

Target sample size: **44**

Randomization (investigator's opinion)

Randomized

Randomization description

Simple method, individual unit of randomization, table of random numbers, allocation with concealment, Non-Probability Convenience Sampling

Blinding (investigator's opinion)

Single blinded

Blinding description

Patients were blinded as they don't know their respected group, therapist who gave treatment and assess the outcome was blinded.

Placebo

Not used

Assignment

Parallel

Other design features

44 number of individuals divided in 2 equal groups of 22 individuals.

Health conditions studied

1

Description of health condition studied

Cervical radiculopathy (CR) is a pathological condition of the cervical nerve root (CNR) that may lead to chronic pain and disability.Cervical radiculopathy is known to be a neurological problem with its associated symptoms like pain, numbness, muscle weakness and diminished reflexes in one or both upper extremities and if prolongs these symptoms lead to headache, functional impairment, activity limitation and difficulty to return to work. Other leading causes of CR are cervical disc hernia ion with and without formation of spur and cervical spondylosis accompanied by inflammation and nerve compression due to dehydration and eventually collapsing of cervical discs.

ICD-10 code

M50.10

ICD-10 code description

Cervical disc disorder with radiculopathy, unspecified cervical region
