

Clinical Trial Protocol

Iranian Registry of Clinical Trials

09 Jun 2026

Investigating the effect of upper extremity game play in the form of "Tele_Rehabilitation" on upper limb sensory-motor function of people with idiopathic Parkinson.

Protocol summary

Study aim

Investigating the effect of upper extremity game play activities in the form of "Tele_Rehabilitation" on upper limb sensory- motor function of people with idiopathic Parkinson's disease

Design

The type of study will be experimental and clinical trial. Patients will be selected as simple or non-probable cases with inclusion criteria. Participants will then be randomly divided into three groups: One group receives upper extremity game play activities in the form of "Tele-Rehabilitation" in clinic. The other group will do the same upper extremity game play in the form of "Tele-Rehabilitation" at home (These two groups also have traditional exercises). The control group only receives occupational therapy traditional exercises in the clinic. All three groups participant will be assessed before and after doing interventions and also will be followed up after two months.

Settings and conduct

The type of study will be experimental and clinical trial. Patients are referred to clinics and hospitals affiliated to Iran University of Medical Sciences. Patients are selected as simple or non-probable cases with inclusion criteria.

Participants/Inclusion and exclusion criteria

Inclusion criteria of participant: - People with Parkinson's disease on a scale of 1 to 4 on Hoehn&Yahr Scale; - level of cognitive performance above 21; - No orthopedic problem;

Intervention groups

- Intervention group based on upper extremity game play activities with "Tele-Rehabilitation" in the clinic, (with traditional exercise), - Intervention group based on upper extremity game play activities with "Tele-Rehabilitation" at home(with traditional exercise), - Control group by using of occupational therapy traditional exercises in the clinic

Main outcome variables

Wrist Position Sense Test, Shoulder Position Sense Test, Hand Active Sensation Test, Motor function of upper extremity, Power grip

Scientific title
Investigating the effect of upper extremity game play in the form of "Tele_Rehabilitation" on upper limb sensory-motor function of people with idiopathic Parkinson.

Public title
Comparison of the effect of using of "Tele_Rehabilitation" and "Traditional methods" on Upper limb Sensory-Motor Function of people with idiopathic Parkinson

Purpose
Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

People with idiopathic Parkinson's disease on a scale of 1 to 4 on Hoehn & Yahr Scale Level of cognitive performance equal or above 21

Exclusion criteria:

having orthopedic problem

Age

From **35 years** old to **80 years** old

Gender

Both

Phase

N/A

Groups that have been masked

- Participant
- Outcome assessor

Sample size

Target sample size: **45**

Randomization (investigator's opinion)

Randomized

Randomization description

After finding patients as cases in hand or simple non probable which have inclusion criteria people as absolute random(envelope sealed method) will be divided into three groups. All 3 groups participants will be received traditional treatment. In the other two groups, in addition to traditional treatment of the third group, they receive a treatment (Tele-rehab) in two different ways (with and without the therapist). In absolute random method (envelope and paper method), the name of group s will be written on a piece of paper and put in an envelope and the participants will be asked to choose one of the papers randomly then the patient will be placed in the chosen group.

Blinding (investigator's opinion)

Double blinded

Blinding description

In this study, the participants are blind (in each 3 groups will be done traditional exercises) and the outcome assessor is also blind (Participants at a specific day without knowledge of each other's treatment referred to a center where the outcome assessor would be solely responsible for taking tests from patients without knowledge of the interventions and related participants).

Health conditions studied

1

Description of health condition studied

Parkinson

ICD-10 code

G20

ICD-10 code description

Parkinson's disease

Primary outcomes

1

Description

Sensory_ Motor Function in Upper Limb

Timepoint

Before intervention, after intervention , follow up after 2 month of intervention

Method of measurement

Wrist Position Sense Test, Shouder Position Sense Test, Hand Active Sensation Test, Box-Block Test, Purde-Peg Board Test, Coin Rotation Test, Nine hole Peg Test, Grip Dynamometer

Secondary outcomes

1

Description

Quality of Life

Timepoint

Before intervention, after intervention, follow up 2 month after intervention

Method of measurement

□ Parkinson Disease Questionnaire

Intervention groups

1

Description

Intervention group- based on upper extremity game play activities with "Tele-Rehabilitation" in clinic: In this group, upper extremity exercise will be done with virtual reality technology in motor pattern needed for Parkinson diseases. Interventions will be done three days a week, for 24 sessions and everyone 1:15 minutes with presence of occupational therapist. Also occupational therapy traditional exercises include such as stretching, twisting, postural control and coordination will be done in each session.

Rehabilitation

2

Description

Intervention group- Intervention group based on upper extremity game play activities with "Tele-Rehabilitation" at home: In this group, upper extremity exercise will be done with virtual reality technology in motor pattern needed for Parkinson diseases. Interventions will be done three days a week, for 24 sessions and everyone 1:15 minutes without presence of occupational therapist and also occupational therapy traditional exercises such as stretching, twisting, postural control and coordination will be done. Before starting these sessions patients will come to clinic for training and familiarizing with exercises and doing test before intervention.

Category

Rehabilitation

3

Description

Control group- Occupational therapy traditional exercise: This exercises will be done for one and half hour and include such as stretching, twisting, postural control and coordination.
