The effect of topical application of lipogel containing lavender essential oil on sleep quality and feeling good in hemodialysis patients

Protocol summary

Study aim
The effect of topical application of lipogel containing lavender essence on sleep quality and well-being of hemodialysis patients

Design
A randomized parallel -controlled clinical trial, double-blind,

Settings and conduct
This study will be performed on hemodialysis patients during dialysis. The patients in the intervention group will receive lipogel with lavender essence oil on their ankles for one minute. In the placebo group, lipogel is administered without lavender essence oil. The control group will receive routine care.

Participants/Inclusion and exclusion criteria
Inclusion criteria: Willingness to participate in the study, 18 years of age or older, with end-stage renal disease, receiving regular dialysis treatment at least three times a week for six months, having complete alertness and ability to communicate, read and write literacy, Exclusion criteria: No history of any allergies (skin and respiratory, especially essential oils and fragrances) and neurological disorders, no mental disorders (such as Down Syndrome and dementia), no experience of any stressful event in the past six months (such as death A close relative), not taking sedatives

Intervention groups
Intervention group: One person removed 5% of Lavandula Angustifulia essential oil from a tube of lipogel containing essential oil after wearing two grams of lipogel-containing glove and after measuring accurately with scales on one patient's legs from ankle to toe two feet in width. Pointing finger and measuring 5 cm in length by ruler uniformly, top to bottom for 1 minute. Placebo: In the above conditions, lipogel without lavender essential oil is applied to the patient's legs in the same amount and method as above. Control: There is no intervention by the research team and they receive routine care.

Main outcome variables
Sleep quality score and well being score

Public title
The effect of topical application of lipogel in hemodialysis patients

Purpose
Treatment

Inclusion/Exclusion criteria

Inclusion criteria:
Willingness to participate in the study 18 years of age or older End-stage kidney disease treated regularly with dialysis at least three times a week for six months with full alertness and ability to communicate, literate

Exclusion criteria:
no history of allergies (skin and respiratory allergies essential oils and fragrances) no history of mental illness, lack of mental disorders(such as Down syndrome and dementia), lack of experience of any stressful event in the past six months (such as death of a close relative), lack of sedative medication

Age
From **18 years** old

Gender

Sample size
Target sample size: **120**

Randomization (investigator's opinion)
Randomized

Randomization description
Patients were randomly assigned to each group using Permuted block Randomization as follows. To randomly assign people to different groups, we select 20 blocks of 6 that will be blocks from 120 different modes such as AABBCC, AABCBC, AACBCB, ABCABC, BABCAC, ACBBCA. In each block there will be two cases of Group A, two cases of Group B and two cases of Group C. The computer program randomly selects one at a time, which is a random order of individuals. Considering the fact that women and men are separated in the Citizen's Center, patients are number 1 to 51 from the Citizens 'Center of the Citizens' Center, and from 52 to 102 from the Men's Ward of the Citizen Dialysis Center and the next 18 patients from the Mazandaran Heart Center

Blinding (investigator's opinion)
Single blinded

Blinding description
In this study, final evaluators will be blinded.

Health conditions studied

1

Description of health condition studied
renal disease

ICD-10 code
N01

ICD-10 code description
Rapidly progressive nephritic syndrome

Primary outcomes

1

Description
Improve sleep quality

Timepoint
Before the intervention and four weeks after the intervention

Method of measurement
The quality of sleep with the Pittsburgh Instrument

2

Description
Feeling Well Using the yield Mental Feeling Tool

Timepoint
Before the intervention and four weeks after the intervention

Method of measurement
the instrument of yield feeling psychologically well

Secondary outcomes

empty

Intervention groups

1

Description
first Intervention group: After obtaining informed consent, during the hemodialysis while the patient in the test group lay on the bed, a same person removed 5% of the Lavogula Lavender essential oil from a tube containing Lipogel with essential oil and then removed From precise measurement with the balance of a patient's legs from wrist to toe point to two finger straps and a length of 5 cm measured by a ruler uniformly, top to bottom for 1 minute.
Category
Treatment - Drugs

2

Description
second Intervention group: After obtaining informed consent, during hemodialysis while the patient in the test group was lying on the bed, a same person after wearing two grams of Lavandula Angustifulia essential oil 5% from the tube containing lipogel with The essential oil is removed and after careful measurement with a balance on the back of the patient's legs from ankle to toe, point to two fingers and 5 cm in length, as measured by a ruler, from top to bottom for 1 minute. It takes 1minutes
Category
Placebo

3

Description
Control group: There is no intervention by the research team and routine care is provided
