The effect of abdominal massage on constipation in elderly patients with fracture

Protocol summary

Study aim

The effect of abdominal massage on constipation in elderly patients with fracture in Poursina Hospital of Rasht

Design

A clinical trial with the control group, parallel-group, randomized groups, without blinding, sample size 66 people (intervention of 33, control of 33)

Settings and conduct

This study is a randomized clinical trial. The study population is elderly with fractures hospitalized in the orthopedic department of Poursina Hospital in Rasht, who are suffering from constipation according to the Constipation Assessment Scale. The sample size is estimated based on the statistical formula of 66 people. After determining the elderly who are eligible to enter the study, the samples are randomly divided into two groups, intervention, and control, based on Random allocation software.

Participants/Inclusion and exclusion criteria

Entry criteria: Elderly men and women 60 years and older; Informed consent; Ability to respond to the questionnaire; Hospitalization due to fracture of more than 48 hours; Constipation based on the constipation Assessment Scale. Exit criteria: cognitive problems; History of mental illness, abdominal hernia, colorectal cancer, inflammatory bowel disease (Crohn's disease, IBD), irritable bowel syndrome and laparotomy; Skin lesions in the abdomen.

Intervention groups

In the intervention group, with 20 ml baby oil for 3 consecutive days, twice a day, morning and evening, during a 15-minute abdominal massage is done according to the instructions of the National Health Service.

Main outcome variables

Constipation score in Constipation Assessment Scale; Stool form; Gastrointestinal symptom rating

Scientific title

The effect of abdominal massage on constipation in elderly patients with fracture		Deputy of university Research and Technology of the University, Old Bldg (building) School of Health, in front of 17 Shahrivar Hospital, Shahid Siadati Ave, Namjoo St, Rasht	
Public title	The effect of abdominal massage on constipation in elderly patients with fracture	City	Rasht
Purpose	Treatment	Province	Guilan
Inclusion/Exclusion criteria		Postal code	4477163485
Inclusion criteria:	Elderly men and women 60 years and older. Informed consent to participate in the study. Ability to respond to the questionnaire. Hospitalization due to fracture of more than 48 hours in the orthopedic department of the hospital under study. Determining the problem of constipation based on the constipation Assessment scale(CAS) [scoring above 5 on the constipation Assessment scale].	Approval date	2020-02-22, 1398/12/03
Exclusion criteria:	Cognitive problems, A history of mental illness, abdominal hernia, colorectal cancer, inflammatory bowel disease (Crohn's disease, IBD), irritable bowel syndrome and laparotomy. Skin lesions in the abdomen.	Ethics committee reference number	IR.GUMS.REC.1398.525
Age	From 60 years old	Health conditions studied	
Gender	Both	1	
Phase	N/A	Description of health condition studied	
Groups that have been masked	No information	Constipation	
Sample size	Target sample size: 66	ICD-10 code	K59.0
Randomization (investigator's opinion)	Randomized	ICD-10 code description	Constipation
Randomization description	At first, the patients were selected by applying the entry criteria. Then they were randomly assigned, based on Random allocation software, in two groups: massage therapy and control.	Primary outcomes	
Blinding (investigator's opinion)	Not blinded	1	
Blinding description		Description	
Placebo	Not used	Constipation score in Constipation Assessment Scale (CAS)	
Assignment	Parallel	Timepoint	Before intervention and 3 days after intervention
Other design features		Method of measurement	Constipation Assessment Scale (CAS)
Secondary Ids		2	
empty		Description	
		Gastrointestinal symptom rating	
		Timepoint	Before intervention and 3 days after intervention
		Method of measurement	Gastrointestinal Symptom Rating Scale (GSRS)
		3	
		Description	
		Stool form	
		Timepoint	Before intervention and 3 days after intervention
		Method of measurement	Bristol Stool Form Scale
		Secondary outcomes
