

Clinical Trial Protocol

Iranian Registry of Clinical Trials

01 Jul 2026

A randomized controlled trial to compare the effect of occupation-based interventions with and without motivational strategies on functional balance, postural control and participation in activities of daily living in people with chronic stroke

Protocol summary

Study aim

The aim of this study is to compare the of occupation-based interventions with and without motivational strategies on postural control and participation in activities of daily living in people with chronic stroke.

Design

This study is a double-blinded controlled randomized trial with parallel groups. Forty-eight chronic stroke survivors will participate in this study and they will be randomly assigned to three groups. Randomization will be performed by the person who is not involved in the study using sealed envelopes method.

Settings and conduct

This study will be performed in Djavad Mowafaghian of Neuro-Rehabilitation Research Center. Control group receives conventional rehabilitation. Occupation-based intervention groups receive 12 sessions interventions (6 weeks, 2 sessions per week, 75 minutes per session) in addition to conventional rehabilitation. In occupation-based interventions with motivational strategies group, different motivational strategies will be used to enhance an individual's level of motivation. Assessors and patients are blinded to the groups allocation.

Participants/Inclusion and exclusion criteria

In this clinical trial study, 48 subjects with chronic stroke will participate. The main inclusion criteria include having the first experience of stroke, passing at least 6 months since stroke, and having an acceptable level of cognitive function (i.e. score equal to or greater than 23 on the Mini Mental State Examination). Subjects are excluded in the case of having unilateral visuospatial neglect and comorbid other neurological diseases, orthopedic disorders, diabetes or addiction.

Intervention groups

Control group; Occupation-based interventions with motivational strategies group; Occupation-based

interventions without motivational strategies group

Main outcome variables

Postural control; functional balance; Participation in activities of daily living

Scientific title
A randomized controlled trial to compare the effect of occupation-based interventions with and without motivational strategies on functional balance, postural control and participation in activities of daily living in people with chronic stroke

Public title
The effect of occupational therapy interventions on balance and participation in activities of daily living in people with chronic stroke

Purpose
Treatment

Inclusion/Exclusion criteria
Inclusion criteria:
Having the first experience of stroke Passing at least 6 months since stroke Ability to walk at least 10 meters with or without assistive device Ability to stand for at least 5 minutes on the foam surface Having an acceptable level of cognitive function, i.e. score equal to or greater than 23 on the Persian version of Mini Mental State Examination Feeling the need or desire to participate in occupations selected for the intervention
Exclusion criteria:
Having unilateral visuospatial neglect (i.e., obtaining score less than 44 at star cancellation test) Co-morbid other neurological diseases, orthopedic disorders (such as low back pain and arthritis), diabetes or addiction according to the report of the patient, or patient's family or physician

Age
From **25 years** old to **75 years** old

Gender
Both

Phase
N/A

Groups that have been masked

- Participant
- Outcome assessor

Sample size
Target sample size: **48**

Randomization (investigator's opinion)
Randomized

Randomization description
Randomization will be performed by the person who is not involved in the study using sealed envelopes method.

Blinding (investigator's opinion)
Double blinded

Blinding description
Evaluation of the primary and secondary outcomes is

performed by experienced individuals who are blind on the groups allocation. Patients are also blind to the type of intervention they receive.

Placebo
Not used
Assignment
Parallel
Other design features

Health conditions studied

1

Description of health condition studied

Stroke

ICD-10 code

I64

ICD-10 code description

Stroke, not specified as haemorrhage or infarction

Primary outcomes

1

Description

Postural control parameters (including velocity and amplitude of center of pressure sways recorded by force plate)

Timepoint

Before and after intervention and 6 weeks after intervention

Method of measurement

Force plate

2

Description

Functional balance

Timepoint

Before and after intervention and 6 weeks after intervention

Method of measurement

Timed Up and Go test, Berg balance scale

3

Description

Level of participation in activities of daily living

Timepoint

Before and after intervention and 6 weeks after intervention

Method of measurement

Canadian occupational performance measure, Meaningful Activity Participation Assessment Questionnaire

Secondary outcomes

empty

Intervention groups

1

Description

Control group: receives conventional rehabilitation (including exercises for upper and lower limb stretching, range of motion and activities of daily living).

Category

Rehabilitation

2

Description

First Intervention group: Occupation-based interventions with motivational strategies group that receives 12 sessions of intervention including different occupations with emphasize on motor learning approach (6 weeks, 2 sessions per week, 75 minutes per session) in addition to the conventional rehabilitation. In this group, different motivational strategies will be used to enhance an individual's level of motivation during the intervention.

Category

Rehabilitation

3

Description

Second Intervention group: Occupation-based interventions without motivational strategies group that receives 12 sessions of intervention including different occupations with emphasize on motor learning approach (6 weeks, 2 sessions per week, 75 minutes per session) in addition to the conventional rehabilitation. In this group, motivational strategies will not be used during the intervention.

Title and more details about the data/document

After the completion of this study, a manuscript regarding the documentation and the results of the study will be prepared and published. If more details are needed, individuals can send their request by email to the person responsible for scientific accountability.

When the data will become available and for how long

One year after publishing the results

To whom data/document is available

Researchers working in academic and scientific institutions

Under which criteria data/document could be used

Use of the documentation is permitted upon written permission.

From where data/document is obtainable

Ghorban Taghizadeh Address: Iran University of Medical Sciences, Shahid Hemmat Highway, Tehran, Tel: 00982122227124, E-mail: taghizadeh.gh@iums.ac.ir

What processes are involved for a request to access data/document

Just sending a request by email and mentioning the

explanation about the cause of the need for documentation is enough.
