

Clinical Trial Protocol

Iranian Registry of Clinical Trials

25 Jul 2026

Comparison of the Effect of Propofol and Sevoflurane Anesthesia on Intraocular Pressure in Patients Undergoing Cataract Surgery.

Protocol summary

Study aim

Comparison of the Effect of Propofol and Sevoflurane Anesthesia on Intraocular Pressure in Patients Undergoing Cataract Surgery.

Design

Double blinded randomized clinical trial

Settings and conduct

After doing the blinding study so that the patient and assessor, who is a resident ophthalmologist and measures and records intraocular pressure, do not know the type of study groups. Patients are divided into two groups in the operating room of Khalili Hospital of Shiraz, in the first intervention group, anesthesia will be maintained with propofol 100 mg / kg / min. In the second intervention group, anesthesia will be maintained with a maintenance dose of sevoflurane (3.3% MAC).

Participants/Inclusion and exclusion criteria

Inclusion Criteria: Patients candidate for cataract surgery, Age 30-70 years, Class (ASA) I, II. Exclusion Criteria: allergies or adverse effects to any of the studied drugs, Blood pressure, Congestive heart failure, Difficult airway management or failure to pass the LMA, Brain Tumor, IOP history, Glaucoma, Other eye diseases, Previous eye surgery.

Intervention groups

Intervention group: In the first intervention group, anesthesia will be maintained with propofol 100 mg / kg / min with oxygen and nitrous oxide of 0.5% and maintaining capnography between 30-35 mm Hg. In the second intervention group, anesthesia will be maintained with a maintenance dose of sevoflurane (3.3% MAC) and 0.5% oxygen and nitrous oxide and capnography 30-35 mm Hg.

Main outcome variables

Intraocular pressure, Blood pressure.

Scientific title

Comparison of the Effect of Propofol and Sevoflurane Anesthesia on Intraocular Pressure in Patients Undergoing Cataract Surgery.

Public title

Comparison the Effect of Propofol and Sevoflurane Anesthesia on Intraocular Pressure in Patients Undergoing Cataract Surgery.

Purpose

Prevention

Inclusion/Exclusion criteria

Inclusion criteria:

Patients candidate for cataract surgery Age 30-70 years Class (ASA) I, II

Exclusion criteria:

Known allergies or adverse effects to any of the studied drugs Blood pressure Congestive heart failure Difficult airway management or failure to pass the LMA Brain Tumor IOP history Glaucoma Other eye diseases Previous eye surgery

Age

From **30 years** old to **70 years** old

Gender

Both

Phase

2-3

Groups that have been masked

- Participant
- Outcome assessor
- Data analyser

Sample size

Target sample size: **144**

Randomization (investigator's opinion)

Randomized

Randomization description

At Randomization.org, I receive two sets of 72 code from the table extracted from the site and share among the 144 study participants. (72 patients receiving will be assigned to the Sevoflurane group and the rest to the Propofol group) who will eventually be divided into the S and P groups.

Blinding (investigator's opinion)

Double blinded

Blinding description

The patient and assessor, who is a resident ophthalmologist and measures and records intraocular pressure, do not know the type of study groups.

Health conditions studied

1

Description of health condition studied

Cataract Surgery

ICD-10 code

H25

ICD-10 code description

Age-related cataract

Primary outcomes

1

Description

Intraocular pressure

Timepoint

Baseline(before premedication), Before induction of anesthesia, 1min after induction of anesthesia, 1min after muscle relaxation, Immediately after LMA insertion, 5 min after LMA insertion, Immediately before extubation of the LMA, After extubation of the LMA

Method of measurement

Intraocular pressure monitor (Tonometer)

Secondary outcomes

1

Description

Blood pressure

Timepoint

From the beginning of the surgery every 5 minutes to 45 minutes (end of the operation)

Method of measurement

Blood pressure monitor

Intervention groups

1

Description

Intervention group: In the first intervention group, anesthesia will be maintained with propofol 100 mg / kg

/min with oxygen and nitrous oxide of 0.5% and maintaining capnography between 30-35 mm Hg.

Category

Prevention

2

Description

Intervention group: In the second intervention group, anesthesia will be maintained with a maintenance dose of sevoflurane (3.3% MAC) and 0.5% oxygen and nitrous oxide and capnography 30-35 mm Hg.
