Comparing the effectiveness of cognitive-behavioral therapy (CBT) and Acceptance and Commitment Therapy (ACT) on anxiety, perceived stress and coping with pain in patients with Leukemia

Protocol summary

Study aim

Comparing the effectiveness of cognitive-behavioral therapy (CBT) and Acceptance and Commitment Therapy (ACT) on anxiety, perceived stress and coping with pain in patients with Leukemia

Design

A randomized controlled clinical trial with parallel groups; sample size 45

Settings and conduct

At first, the patients with leukemia were introduced to the researcher in coordination with Sayyed Shohada Hospital in Isfahan. Then, the researcher, by interviewing and examining the inclusion and exclusion criteria, selected 45 of them by available sampling method and randomly divided into three groups. Then, the researcher randomly selected two groups as the experimental group and one group as a control group. Then, one of the experimental groups received 9 sessions of Acceptance and Commitment Therapy, and the other group received 12 sessions of Cognitive-Behavioral Therapy.

Participants/Inclusion and exclusion criteria

Inclusion criteria: aged 30-80 years, Having a minimum reading and writing literacy, normal listening ability and informed consent to attend therapy sessions. Exclusion criteria: mental disorders that require urgent treatment, disruption of the normal course of treatment, lack of cooperation, and severe physical disability.

Intervention groups

In the first group, acceptance and commitment therapy, in the second group cognitive-behavioral therapy, in the third group no intervention will be performed.

Main outcome variables

anxiety; perceived stress; coping with pain

Scientific title

Comparing the effectiveness of cognitive-behavioral therapy (CBT) and Acceptance and Commitment Therapy (ACT) on anxiety, perceived stress and coping with pain in patients with Leukemia

Public title

Comparing the effectiveness of cognitive-behavioral therapy (CBT) and Acceptance and Commitment Therapy (ACT) on anxiety, perceived stress and coping with pain in patients with Leukemia

Purpose

Supportive

Inclusion/Exclusion criteria**Inclusion criteria:**

Age range 30 to 80 years Having a minimum reading and writing literacy Normal listening ability Informed consent to attend therapy sessions

Exclusion criteria:

Having any chronic diseases like diabetes, heart disease and lung disease Having any physical or mental disability Any drug use Taking any sedative medication History of psychiatric illness Absence in more than 3 treatment sessions

Age

From **30 years** old to **80 years** old

Gender

Both

Phase

Groups that have been masked

No information

Sample size

Target sample size: **45**

Randomization (investigator's opinion)

Randomized

Randomization description

Block randomization was performed by the statistical consultant as follows: Randomization was performed in three groups: Acceptance and Commitment Therapy, Cognitive-Behavioral Therapy, and Control group. Block randomization was done by building blocks of sequences so that the same number of participants was assigned to study groups within each group. We first coded the groups in Latin letters as follows: A = Acceptance and Commitment Therapy, B = Cognitive-Behavioral Therapy, and C= Control Group In this study with three groups A, B and C we created the following six groups and assign 1 to 6 each: ABC-ACB-BAC-BCA-CAB-CBA Then we used a random number table to select one of these blocks whenever the numbers 1, 2, 3, 4, 5 and 6 appear, and if the other number appears, considered null and go to the next choice. In fact, we obtained a random sequence of numbers with a random number table that we considered the order of assignment for each number. As such, the number of people in the groups was approximately equal.

ICD-10 code description

Lymphoid leukemia

Primary outcomes**1****Description**

Anxiety

Timepoint

Measurement will be done in pre-test, post-test and follow-up three months after post-test

Method of measurement

Beck Anxiety Inventory (1988)

2**Description**

Coping with pain

Timepoint

Measurement will be done in pre-test, post-test and follow-up three months after post-test

Method of measurement

Pain coping strategies Questionnaire Roseneshteil and kiev (2000)

3

Description

Perceived Stress

Timepoint

Measurement will be done in pre-test, post-test and follow-up three months after post-test

Method of measurement

Perceived Stress Scale Cohen et.al (1983)

Secondary outcomes

empty

Intervention groups

1

Description

Intervention Group One: Acceptance and commitment Therapy - For the first experimental group, 9 sessions of 90-minute Acceptance and commitment Therapy will be taught in groups (Hayes, 2004).

Category

Treatment - Other

2

Description

Second Group Intervention: Cognitive Behavioral Therapy - For the second group Cognitive Behavioral Therapy (Beck, 1988) will be administered in 12 sessions and each session for 90 minutes.

Category

Treatment - Other

3

Description

Control group: No Intervention
