Comparison of the effect of teach-back method and video clip teaching on the sense of coherence of mothers with children suffering from asthma

Protocol summary

Study aim

Determining and Comparison of the effect of teach-back method and video clip teaching on the sense of coherence of mothers with children suffering from asthma

Design

Trial in control group, with parallel, randomized groups, 75

Settings and conduct

After the approval of the research plan in the Ethics Committee of the University and the introduction of the relevant letter, during the contact with mothers and face to face interviews, they thoroughly reviewed the inclusion criteria and then proceeded with the persons eligible for inclusion criteria. The research will speak and the written informed consent form will be completed. At the beginning of the study, the demographic questionnaire and Antonovsky's cohesion questionnaire will be completed by the researcher for mothers of three groups. In this study, pediatric asthma and allergy physicians will be used to visit patients at Shahid Mofatteh Pediatric Clinic No. 2 and 3. The venue for the training is the conference hall of the Shahid Beheshti Hospital with audiovisual facilities.

Participants/Inclusion and exclusion criteria

Inclusion criteria: 1- Ability to communicate and answer questions 2- Consent to participate in the study and sign the informed consent form 3- At least one year after the definitive diagnosis of a child's asthma by a specialist physician 4- Mother's sense of cohesion with a cut-off point of 52 and less Exclusion criteria: 1- Mother's Mental Illness and Chronic Physical Illness 2. Maternal previous participation in studies similar to current research

Intervention groups

For the return teaching intervention group, adjusted training program on sense of cohesion for 8 sessions, one session per week. Face to face training for 30-45 minutes. In the video clip, face-to-face tutorials by showing this video clip in two sessions. The duration of

this video clip will be 15 minutes.

Scientific title
Comparison of the effect of teach-back method and video clip teaching on the sense of coherence of mothers with children suffering from asthma

Public title
Comparison of the effect of teach-back method and video clip teaching on the sense of coherence of mothers with children suffering from asthma

Purpose
Education/Guidance

Inclusion/Exclusion criteria
Inclusion criteria:
 Ability to communicate and answer questions
 Consent to participate in the study and sign the informed consent form
 At least one year has passed since the specialist diagnosis of child asthma
 Mother's sense of cohesion with a cut-off point of 52 and below
Exclusion criteria:
 Mother's Mental Illness and Chronic Physical Illness
 Previous maternal participation in studies similar to current research

Age
No age limit

Gender
Female

Phase

Sample size
Target sample size: **75**

Randomization (investigator's opinion)
Randomized

Randomization description
Since the study population of this study is limited, eligible study participants are selected by non-probability sampling and available. After selection, participants will be randomly assigned to a block between the three groups. In other words, eligible participants will be selected by simple non-random selection, but the allocation of participants will be random.

Blinding (investigator's opinion)
Not blinded

Health conditions studied

1

Description of health condition studied
 The sense of coherence of mothers with children suffering from asthma

ICD-10 code

ICD-10 code description

Primary outcomes

1

Description
 Sense of coherence

Timepoint
 Mothers' sense of coherence at baseline (before intervention) and one month after intervention

Method of measurement
 Sense of Coherence Questionnaire (SOC-13)

Secondary outcomes

empty

Intervention groups

1

Description
 Intervention group: teach-back method: Training in this method will be provided by the researcher in 8 sessions, one session per week for 2 months. The training is flexible to the needs of mothers and will run face to face for 30-45 minutes. Educational content will be explained to people in a simple language, far from specific medical terms. Then, at the end of the same session, people will be given the opportunity to speak in their own language. If the material is inaccurate or inaccurate, the researcher will correct and complete the relevant training until the person has correctly returned the material to their

language. will be. In other words, the return teaching score will be determined if the mother answers 75% of the questions correctly, which means that the training will be effective and otherwise the training will continue.
