

Clinical Trial Protocol

Iranian Registry of Clinical Trials

30 Jun 2026

Evaluation of the effect of lateral position on arterial blood O₂ and saturation percent in patients with ischemic CVA with ventilator associated pneumonia

Protocol summary

Study aim

Evaluation of the effect of lateral position on arterial blood O₂ content and O₂ saturation in ischemic CVA patients with ventilator-associated pneumonia

Design

Clinical trial without control group, with single group, not blinded, nonrandomized group

Settings and conduct

In this clinical trial study, after coordinating with hospital authorities and ICU ward and providing necessary explanations and consent of patient relatives, 50 ICU patients were selected by convenience sampling method that meet the inclusion criteria mentioned in the study. The method of preparing the patients is that in the supine state, the percentage of hemoglobin saturation is measured by pulse apparatus and ABG (arterial blood gas sample) is prepared from the patient and then changed laterally for two The hour is restored to the percent saturation of hemoglobin and ABG. The samples will be sent to the laboratory under standard conditions and after data analysis and analysis, the results will be presented in thesis and paper.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Patients 50-70 years old with ischemic CVA; Patients undergoing mechanical ventilation in the ICU; Lack of multiple trauma; No restriction on position change; Exclusion criteria: Instability of vital signs in the new position; Having underlying illness and problem; Oxygen saturation less than 80%

Intervention groups

All patients under study were included in the intervention group.

Main outcome variables

Arterial blood oxygen pressure (FiO₂); Oxygen saturation (O₂sat)

Scientific title

Evaluation of the effect of lateral position on arterial blood O₂ and saturation percent in patients with ischemic CVA with ventilator associated pneumonia

Public title

The effect of supine position on arterial blood O₂ and saturation percentage in patients with ischemic CVA with ventilator-induced pneumonia

Purpose

Diagnostic

Inclusion/Exclusion criteria

Inclusion criteria:

Patients 50-70 years old with ischemic CVA Patients undergoing mechanical ventilation in the ICU Lack of multiple trauma No restriction on position change

Exclusion criteria:

Instability of vital signs in the new position Having underlying illness and problem Oxygen saturation less than 80%

Age

From **50 years** old to **70 years** old

Gender

Both

Phase

Health conditions studied

1

Description of health condition studied

Ventilator associated pneumonia

ICD-10 code

J95.851

ICD-10 code description

Ventilator associated pneumonia

Primary outcomes

1

Description

Arterial blood oxygen pressure (FiO₂)

Timepoint

For two hours after the supine state

Method of measurement

Pulse Oximeter

2

Description

Oxygen saturation (O₂sat)

Timepoint

For two hours after the supine state

Method of measurement

Pulse Oximeter

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: All patients fall into one group and arterial blood pressure and oxygen saturation are assessed in both supine and lateral states.
