

Clinical Trial Protocol

Iranian Registry of Clinical Trials

18 Sep 2026

D comparing psychological capital based therapy with cognitive behavioral therapy on psychological capitals and symptoms of depressed patients.

Protocol summary

Study aim

Comparing the effectiveness of psychological capital therapy and cognitive- behavior therapy on depression symptoms

Design

Clinical trials with control group, randomized to 45 patients. Simple randomization was performed based on the Rank Excel function

Settings and conduct

on the effectiveness of depression treatments. It was done in Isfahan. All three groups were initially assessed for depression and psychological capital by Beck Depression Scale and McGee Psychological Capital. The treatment groups were treated for eight weeks. The final three groups were re-evaluated for depression and psychological capital

Participants/Inclusion and exclusion criteria

adults with mild to moderate depression. Inclusion criteria were age over 18 years, diagnosis of unipolar depression disorder based on DSM-IV criteria, ability to read and write, and normal intelligence. Exclusion criteria were those under 18 years of age, criteria for severe depression, more than 10 sessions of absenteeism.

Intervention groups

One group received psychological capital therapy, the other group received cognitive-behavioral therapy, and the third group waited for treatment.

Main outcome variables

The efficacy of cognitive-behavioral therapy on reducing depressive symptoms ; The efficacy of Psychological Capital Therapy on Depression; Comparison of the Effectiveness of Psychological Capital Therapy and Cognitive-Behavioral Therapy on Depression

Target sample size: **45**

More than 1 sample in each individual

Number of samples in each individual: **15**

simple random

Actual sample size reached: **45**

Randomization (investigator's opinion)

Randomized

Randomization description

Patients referred to several counseling centers in Isfahan were selected based on the entry and exit criteria of 45 patients who had mild to moderate depressive symptoms. The subjects were randomly assigned to two experimental groups and one control group through statistical software. Each group consisted of 15 people. The first experimental group received behavioral cognitive therapy. The second group received treatment based on psychological capital and the third group remained waiting for treatment.
