The Effects of Acupuncture on Infertility-related Stress and In Vitro Fertilization (IVF) Outcomes

Protocol summary

Study aim

Considering the high prevalence of infertility-related concerns and limited studies on the efficiency of acupuncture in infertility-related stress and IVF outcomes, we conduct this study to determine whether acupuncture affects infertility-related stress in infertile patients, refer to Omme-Leila Infertility Clinic in Bandar Abbas, Iran..

Design

Two parallel groups with randomized trial with pretest-posttest and evaluation.

Settings and conduct

This quasi-experimental study had a pretest-posttest control-group design. The statistical population included all infertile patients in the age range of 25-45 years under IVF treatment at Omme-Leila Infertility Clinic during 2018. A total of 120 patients were randomly divided into either the case or control group (60 patients per group) via convenience sampling. Data were collected by distributing questionnaires among patients before and after acupuncture and 35 minutes before embryo transfer

Participants/Inclusion and exclusion criteria

The inclusion criteria for this study are all female patients referring to the Bandar Abbas Omme-leila clinic between 25-45 years old . Patients under 25 years old and over 45 years old and rare diseases patients are not include from this study.

Intervention groups

The data were collected by distributing Newton questionnaire in control group 35 minutes before embryo transfer.

Main outcome variables

This study impacts acupuncture on 1- social concerns; 2- sexual concerns; 3- relationship concerns; 4- need for parenting; 5- childless lifestyle; referring to Bandar Abbas Omme- Leila Infertility Clinic for IVF.

Health conditions studied**1****Description of health condition studied**

This study investigates the impact of acupuncture on infertility stress

ICD-10 code

Z31.2

ICD-10 code description

in vitro fertilization

Primary outcomes**1****Description**

The primary outcome variable in this study is the rate of stress reduction in infertile patients (25-45 years old) referred to Omme-Leila clinic .

Timepoint

Acupuncture is performed 35 minutes before embryo transfer.

Method of measurement

Newton Infertility Stress Questionnaire

Secondary outcomes

empty

Intervention groups**1****Description**

Intervention group:Patients complete the Newton questionnaire after training, then they receive acupuncture treatment services, and after that patients complete the questionnaire again. After 35 minutes the embryo is transferred.
