The effect of misoprostol with isosorbide mononitrate on the induction of first-trimester abortion

Protocol summary

Study aim
The effect of misoprostol with isosorbide mononitrate on the induction of first-trimester abortion

Design
This study is a one-blinded clinical trial. The study population will be all less than 13 weeks pregnant who are candidates for termination of pregnancy referred to Imam Reza Hospital of Kermanshah.54 eligible patients will be selected conveniently and randomly assigned to two intervention and control groups.

Settings and conduct
This study that will be conducted in Imam Reza hospital of Kermanshah city is a one-blinded one that the data analyzer was kept blind to the allocation of study groups. At baseline, both groups were matched for age, gestational age, parity, gravidity, height, weight (BMI), and previous abortion.

Participants/Inclusion and exclusion criteria
Inclusion criteria: Nullipara and multipara to 5 Parity and singleton women; No history of previous cesarean section and uterine surgery; Exclusion criteria: Women with open cervix and contraindication for isosorbide mononitrate (IMN); Women with significant heart disease or anemia

Intervention groups
In the intervention group, 40mg isosorbide mononitrate tablets will be placed in the posterior fornix. Then 4 hours later 800mcg of misoprostol, equivalent to four 200mcg tablets (manufactured by Aria Pharmaceuticals), in a single dose of the saline-will embedded posterior fornix.In the control group, 40 mg vitamin B6 (manufactured by Galinus) will be implanted in the vagina in the posterior fornix b then 4 hours later 800 mcg of misoprostol, equivalent to four 200 mg mcg tablets (manufactured by Aria) in a single dose of saline will embedded posterior fornix.

Main outcome variables
Time of cervical opening from induction onset, time of the secretion of pregnancy products from the onset of induction, complete abortion

Public title
The effect of misoprostol with isosorbide mononitrate on the induction of first-trimester abortion

Purpose
Treatment

Inclusion/Exclusion criteria

Inclusion criteria:
Nullipara and multipara to 5 Parity and singleton women No history of previous cesarean section and uterine surgery

Exclusion criteria:
Women with the open cervix and contraindication for isosorbide mononitrate (IMN) Women with significant heart disease or anemia

Age
No age limit

Gender
Female

Phase
2-3

Groups that have been masked

- Data analyser

Sample size
Target sample size: **54**

Randomization (investigator's opinion)
Randomized

Randomization description
Using the random number table, patients are divided into two groups of 27. Each patient is assigned a 4-digit code based on the random number table, Based on the right number of patients code, the patients are divided into two groups. Patients whose last digit is 0, 2, 4, 6, 8 will be assigned to the intervention group and patients whose last digit is 1,3,5, 7, 9 will be assigned to the control group.

Blinding (investigator's opinion)
Single blinded

Blinding description
In this study, the data analyzer was kept blind to the allocation of study groups

Health conditions studied

1

Description of health condition studied
Therapeutic Abortion

ICD-10 code
O04

ICD-10 code description
Therapeutic/Medical Abortion (termination of pregnancy)

Primary outcomes

1

Description
Time of cervical opening from induction onset

Timepoint
24 hours after the end of the study

Method of measurement
Doctor Observation

2

Description
Secretion time of pregnancy products from onset of induction

Timepoint
24 hours after the end of the study

Method of measurement
Doctor Observation

3

Description
Complete abortion

Timepoint
24 hours after the end of the study

Method of measurement
Doctor Observation

Secondary outcomes

empty
