The effect of an educational plan on the internet addiction of high-school adolescent girls in Isfahan,1398

Protocol summary

Study aim

Determining the Impact of an Educational Plan on Internet Addiction of Secondary School Girls in Isfahan in the School Year 1398

Design

Upper trial with control group - with randomized parallel groups - with sample size 54

Settings and conduct

The study was conducted in Isfahan Secondary School Girls' Secondary School. The questionnaire was distributed among a large number of students and then randomly selected from 27 individuals with internet addiction score of 49 and randomly divided into 8 sessions. Training compiled with the content of Cognitive Behavioral Therapy and Time Management is provided and will be retested after 2 weeks.

Participants/Inclusion and exclusion criteria

- Teenage girls between 14 and 18 years
- Individuals who are attending public secondary schools in Isfahan.
- The student has Internet access
- Their Internet addiction score is over 49 according to the Yang questionnaire.
- Participants should not be diagnosed with psychiatric illness and not undergo drug therapy.
- Adolescents and their parents' satisfaction with research Exclusion skills from the article
- Lack of follow-up by any of the participants or their parents.
- Start using sedatives during research for any reason
- Making peace of mind seeing, studying, and so on while studying
- Absence in at least one meeting
- Change of school during the intervention due to immigration

Intervention groups

Eight training sessions with the content of Cognitive Behavioral Therapy and Time Management-Control group did not have training during the study period.

Main outcome variables

Internet addiction

Description

The percentage of people with a Yang Internet Addiction Questionnaire score is over 49

Timepoint

Before intervention and 2 weeks after educational intervention

Method of measurement

Yang Internet Addiction Questionnaire

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: At least one class will be randomly assigned to each intervention school in the intervention school. Then the class students will talk about the research objectives and the questionnaires will be provided with the consent of all students in the study and a number will be given to each student. The participants will complete the questionnaire. After statistical analysis, the participants were selected by simple random sampling. Planning and coordination with the school administrator will be performed prior to the intervention to select the appropriate place for training and to determine the timing of classes. It is also required that one of the parents of the student sign the consent form to participate in the research, and during the phone call to confirm consent with the parent, the student will be given the consent form and the researcher will be provided with the researcher number. And if the student is absent at each meeting, parents will be contacted for coordination and information. There will be eight 45-minute training sessions for the test group. The

researcher, citing articles and authoritative books, provides the necessary training to reduce internet addiction, with the content of time management and controlling factors leading to Internet use, with a look at cognitive-behavioral therapy. Meetings are held at the school in coordination with the principal and the relevant authorities in non-classroom time with similar educational conditions. Questionnaires will be completed again by the participants two weeks after the last session. Then the data will be analyzed using SPSS software version 26 and related statistical tests.

Behavior

2

Description

Control group: 1016/5000 At least one classroom will be randomly assigned from each educational base at the same time as the intervention group begins sampling. Then, the class students will discuss the research objectives and the questionnaires will be provided with the consent of all students in the study and a number will be given to each student. The sample will complete the questionnaires and the consent form. After statistical analysis, the participants who were selected for the study with a score of 49 on the Young Internet Addiction Questionnaire were selected by simple random sampling. They will then be given a written consent to provide the parents with a signature and then hand over to the school nurturer. There is no intervention in this group and people will have their daily activities. Questionnaires will be filled out by the participants at the end of the intervention group as the sample is completed. To comply with ethical standards, individuals in this group may participate in meetings that are held after the intervention if the study is effective and willing.
