

Clinical Trial Protocol

Iranian Registry of Clinical Trials

16 Sep 2026

Comparison of conventional and physiological childbirth on breast crawl and maternal satisfaction.

Protocol summary

Summary

The aim of this study was to compare the effects of conventional and physiological childbirth on baby crawl and maternal satisfaction. A total of 98 pregnant women were randomly divided into two groups of natural and physiological childbirth. Immediately after birth, the baby was placed on the mother's abdomen and the researcher measured duration of breast crawl in the lax, crawl, rest, acquaintance, sucking time. Maternal satisfaction was also measured. Then the data were compared and recorded in the both groups.
