Comparison of Open Prostatectomy Patients In terms of Bleeding and Operative site Infection,with and without Surgicel

Protocol summary

Study aim
Control of bleeding and Infection in patients undergoing open prostatectomy with the use of surgical

Design
Clinical trial with intervention groups, with parallel groups, double-blinded, randomized

Settings and conduct
This study is carried out at Imam Reza Hospital in Tabriz. In this double-blind randomized clinical trial, 30 patients undergoing open prostatectomy.The patients will be randomized in one of the two groups with or without the use of surgical. During surgery, the amount of bleeding until the end of surgery in the two groups, will be investigated. All patients will be evaluated for hemoglobin, hematocrit and complications after transfer to the ward.

Participants/Inclusion and exclusion criteria
Inclusion criteria:Patient who are candidates for open prostatectomy، Patients aged 40 to 90 years، Having informed consent to participate in the study Non-inclusion criteria:Existence of an bleeding disorder, History of previous prostatic or urethral surgery، Having bladder stone.

Intervention groups
Intervention group: open prostatectomy with the use of surgical Control group: open prostatectomy without the use of surgical

Main outcome variables
Blood Loos, Infection, Inflammation

Scientific title
Comparison of Open Prostatectomy Patients In terms of Bleeding and Operative site Infection,with and without Surgicel

Public title
Evaluation of the effects of surgicel in open prostatectomy surgery

Purpose
Treatment

Inclusion/Exclusion criteria

Inclusion criteria:
Patient who are candidates for open prostatectomy Patients aged 40 to 90 years Having informed consent to participate in the study
Exclusion criteria:
Existence of an bleeding disorder History of previous prostatic or urethral surgery; (c) Having bladder stone.

Age
From **40 years** old to **90 years** old

Gender
Male

Phase
N/A

Groups that have been masked

- Participant
- Data analyser

Sample size
Target sample size: **30**

Randomization (investigator's opinion)
Randomized

Randomization description
Random method: Block, Random unit: individual, Random Tool: Random Block 4. for this purpose, 25 blocks with 4 subjects in each block will be used. the combination of all patterns will be considered including AABB, ABAB, BABA, BBAA, BABA, BAAB. For selecting each blocks, dice drooped and the block number will be selected. this procedure continued to completed the allocation and reached to sample size.

Blinding (investigator's opinion)
Double blinded

Blinding description
This is a double-blinded study and Researcher and patients are kept unaware of intervention in each group and In order to allocation concealment, the type of intervention will be written on paper and placed in numbered, matte and packed envelopes.The envelopes will be opened in the order of participation of the participants and the type of group will be determined.

2020-02-17, 1398/11/28

Ethics committee reference number
IR.TBZMED.REC.1398.1215

Health conditions studied

1

Description of health condition studied
Open prostatectomy

ICD-10 code

ICD-10 code description

Primary outcomes

1

Description
Hemoglobin level

Timepoint
Preoperative, postoperative, days 2 and 3

Method of measurement
According to the lab and on the basis grams per deciliter

2

Description
Intraoperative blood loss

Timepoint
At the end of surgery

Method of measurement
The volume of blood absorbed by surgical gauze was estimated using Gauze Visual Analogue method. The mentioned figures plus the amount of blood in the surgical suction pump was considered as the total amount of intraoperative blood loss

3

Description
Hematocrit

Timepoint
Preoperative, postoperative, days 2 and 3

Method of measurement
According to the lab and on the basis percent

Secondary outcomes

1

Description
Infection

Timepoint
7 days after surgery

Method of measurement

Redness,secretion, tenderness in the wound or wound dehiscence

Intervention groups

1

Description
Intervention group: Surgicel (a topical cellulose homeostatic agent) will be used to control bleeding
Category
Treatment - Surgery

2

Description
Control group:Bleeding is controlled by an electrocautery (without the use of surgical)
Category
Treatment - Surgery
