The effect of kinesio taping on control of posture ،kinematic and knee joint proprioception in physically active female with dynamic knee valgus

Protocol summary

Study aim
The purpose of this study is to investigate the effect of kinesio taping on control of posture, kinematic and knee joint proprioception in physically active women with dynamic knee valgus.

Design
Clinical trial with placebo control group, with arallel groups, single blinded, randomized

Settings and conduct
The tests will be carried out by the specialists at the Sport Rehabilitation in One Gym in Roomeshgan City. During the testing, the participant will be unaware of the main purpose of the research.

Participants/Inclusion and exclusion criteria
The inclusion criteria included: age range 18 to 28 years, having a knee dynamic valgus angle of more than 12 degrees, having at least two years of regular sports experience, and exclusion criteria including: history of mechanical back pain in the past year, history of any damage in the past six months, History of knee surgery, History of ankle surgery.

Intervention groups
"Intervention group": kinesio taping group (kinesio tape with yellow color, ATEX brand made in South Korea) will be applied to the muscles of the gluteus medius with tension %20 and tibialis anterior with %50 tension for 48 hours, then kinematic, control of posture and knee joint properioception will be measured before and after application of kinesio taping. "Placebo Control group": placebo control group (kinesio tape with yellow color, ATEX brand made in South Korea no tension) will be applied to the muscles of the gluteus medius and tibialis anterior with no tension for 48 hours, then kinematic, control of posture and knee joint properioception will be measured before and after application of kinesio taping. therefore, the first group really applied kinesiotape and the second group will be applied as placebo kinesiotape .

Main outcome variables
Disorder in control of posture, properioception and knee joint kinematic .

Scientific title
The effect of kinesio taping on control of posture ،kinematic and knee joint proprioception in physically active female with dynamic knee valgus

Public title
The effect of kinesio taping on dynamic knee valgus

Purpose
Treatment

Inclusion/Exclusion criteria

Inclusion criteria:
age range 18 to 28 years Having a knee dynamic valgus angle of more than 12 degrees Having at least two years of regular sports experience

Exclusion criteria:
History of mechanical back pain in the last year History of any damage in the last six months History of knee surgery History of ankle surgery.

Age
From **18 years** old to **28 years** old

Gender
Female

Phase
N/A

Groups that have been masked

- Participant

Sample size
Target sample size: **26**

Randomization (investigator's opinion)
Randomized

Randomization description
Randomization was done by lottery in which the participant choose one of two papers ("intervention" and "placebo control").

Blinding (investigator's opinion)
Single blinded

Blinding description
Patients will not know in which group will they be placed because in both groups the kinesiotape will be glued to the same area of the thigh and leg and in both groups, the size of the attached tape was the same .the only difference between the two group was that in the kinesiotape group was taped by the Kinesiotape with tension, while the placebo group was taped with Kinesiotape but with-out any tension and patients did not notic any difference in kinesiotaping tension.

Health conditions studied

1

Description of health condition studied
Dynamic Knee Valgus

ICD-10 code

ICD-10 code description

Primary outcomes

1

Description
Disorder in kinematic

Timepoint
Before the intervention begins and 48 hours after the end of the intervention

Method of measurement
Kinovea software

2

Description
Disorder in control of posture

Timepoint
Before the intervention begins and 48 hours after the end of the intervention

Method of measurement
Y balance test and Bess balance test

3

Description
Disorder in knee joint properioception

Timepoint
Before the intervention begins and 48 hours after the end of the intervention

Method of measurement
goniameter

Secondary outcomes

1

Description
Knee flexion and valgus angles.
Timepoint
Before the intervention begins and 48 hours after the end of the intervention
Method of measurement
kinovea software

2

Description
Balance scores
Timepoint
Before the intervention begins and 48 hours after the end of the intervention
Method of measurement
Y balance test and Bess balance test

3

Description
Joint angle reconstruction error
Timepoint
Before the intervention begins and 48 hours after the end of the intervention
Method of measurement
goniameter

Intervention groups

1

Description
Intervention group: kinesio taping group (kinesio tape with yellow color ATEX brand made in South Korea) will be applied to the muscles of the gluteus medius with %20 tension and tibialis anterior with %50 tension for 48 hours, then kinematic, control of posture and knee joint properioception will be measured before and after application of kinesio taping.
Category
Rehabilitation

2

Description
Control Placebo group": control placebo group with kinesiotape (kinesio tape with yellow color ATEX brand made in South Korea) intervention as the first intervention group but without tension will be applied to the muscles of the gluteus medius and tibialis anterior for 48 hours, then kinematic, control of posture and knee joint properioception will be measured before and after application of kinesio taping.
Category
Rehabilitation
