Effect of Gutta-percha and Mineral Trioxide Aggregate on Post Endodontic Pain in Teeth with Asymptomatic Apical Periodontitis: A Randomized Clinical Trial

Protocol summary

Study aim

The aim of the present study is to determine post endodontic pain score after root canal therapy using gutta-percha alone or Mineral Trioxide Aggregate plug with gutta-percha in teeth with asymptomatic apical periodontitis.

Design

A randomized clinical trial with control group, parallel groups, single-blinded.

Settings and conduct

This study will be done in the Faculty of Dentistry Islamic Azad University of Isfahan(Khorasgan). Among patients who enter for root canal therapy, the ones that have asymptomatic apical periodontitis will be chosen. If they sign the informed consent form they will enter the study. Participants are divided into two groups using simple randomization and random number table. Endodontic treatment is similar for both groups except that in one group canal is filled with gutta-percha and the other group, the canal is filled with MTA and gutta-percha. For blinding, a pair of opaque glasses will be worn on the participants' eyes.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Patients 18 to 65 years old with asymptomatic apical periodontitis teeth. Exclusion criteria: Usage of pain killer during the last 12 hours

Intervention groups

Patients who need root canal therapy will be divided into two groups. Root canal therapy will be done with gutta-percha for one group and Mineral Trioxide Aggregate plug and gutta-percha for the other group.

Main outcome variables

Post endodontic pain score will be measured in 6, 12, 24, 48, and 72 hours after intervention for each group. Post endodontic pain scores will be compared between two groups at the same time intervals after an intervention.

Scientific title

Effect of Gutta-percha and Mineral Trioxide Aggregate on Post Endodontic Pain in Teeth with Asymptomatic Apical Periodontitis: A Randomized Clinical Trial

Public title

The effect of obturation materials on post endodontic pain

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Ability to read and to understand the questionnaire
Singnature of the informed consent form
Patients between 18 to 65 years old
Tooth with asymptomatic apical periodontitis confirmed with cold test and radiography
Restorable tooth
Periapical index of 3, 4 or 5

Exclusion criteria:

Presence of a sinus tract
Mandibular second premolar
Retreatment cases
Usage of pain killer during the last 12 hours
Tooth with no occlusal contact

Age

From **18 years** old to **65 years** old

Gender

Both

Phase

N/A

Groups that have been masked

Sample size

Target sample size: **60**

Actual sample size reached: **100**

Randomization (investigator's opinion)

Randomized

Randomization description

In this study, participants will be divided into two groups using a permuted block randomization method. Randomization will be done using 25 blocks with a 4-factor design. In each factor of the block design two participants are assigned to the control group and two participants to the intervention group. Then 25 numbers, from 1 to 6 will be selected using randomization table. For allocation concealment, the type of groups will be given to participants according to the block order via opaque envelopes by a person who is not aware of the randomization procedure. The canals of the teeth will be filled with gutta-percha in the control group and MTA with gutta-percha in the intervention group.

Blinding (investigator's opinion)

Single blinded

Blinding description

Using a pair of opaque glasses on participants' eyes during treatment so that the patients won't be able to see the treatment procedure.

Title and more details about the data/document

Participants data (pain score, sex and involving jaw without names of participants), study protocol, statistical analysis plan, informed consent form and study report will be shared.

When the data will become available and for how long

Documents and data files will be available after publishing the article and will always be available.

To whom data/document is available

People working in academy institutions

Under which criteria data/document could be used

Educational and research uses

From where data/document is obtainable

From the library of Faculty of Dentistry Islamic Azad University of Isfahan (Khorasgan).

What processes are involved for a request to access data/document

A formal request should be given to the library of Faculty of Dentistry Islamic Azad University of Isfahan (Khorasgan) and the data will be given to them.
