

Clinical Trial Protocol

Iranian Registry of Clinical Trials

17 Jun 2026

The Effectiveness of Short-Term Psychodynamic therapy on Job Stress Coping Strategies, Health-Related Quality of Life, and Self-efficacy of Islamic Republic of Iran Air Traffic Control Staff.

Protocol summary

Study aim

The Effectiveness of Short-Term Psychoanalysis on Job Stress Coping Strategies, Health-Related Quality of Life, and Self-efficacy of Air Traffic Control Staff in the Islamic Republic of Iran.

Design

This will be a study with a pretest-posttest design. To accomplish this, burnout questionnaires will be provided, in the first phase, to flight control controllers who employ approximately 200 people at the control center, 60 at Mehrabad Airport, and employed. Interviews will be selected for the test if it is significant that they have burnout in two groups of 15 experiment and control.

Settings and conduct

The statistical population of the study consisted of all air traffic control personnel, total of 260 staff working in Mehrabad International Airport Flight Control Tower and Tehran Air Traffic Control Center. Mehrabad is in a leak and takeoff, and the staff at the Air Traffic Control Center oversees all flights crossing the country, as well as all operational flights in the country.

Participants/Inclusion and exclusion criteria

Working in the air traffic control section of Iran Airports & Navigation Company

Intervention groups

The two experimental and control groups will be randomly selected 15 individuals each, The efficacy of short-term psychosis will be used in the intervention group. The pivotal and short-term psychotherapy approaches are based on the type of therapeutic relationship and the nature of the disclosure. The control group will be evaluated without the short-term psychotherapy treatment provided in the timing provided.

Main outcome variables

Applying research results to promote health, quality of life and self-efficacy of employees in the aeronautical

industry and increase flight safety in the military and civilian fields.

Intervention groups

1

Description

Intervention group: Group of 15 selected for treatment, The treatment is a short-lived intensive-care psychotherapy provided by an Iranian-Canadian Habib Devanlu. And for the past forty years, it has been formulated and focused on the complete liberation of the patient from symptom disorders as well as multidimensional structural changes of character. The pivotal and short-term goals of psychotherapy are based on the type of therapeutic relationship and the nature of the disclosure. This treatment is based on a single interview session during a single interview session and according to the schedule of psychotherapy sessions and the content of the sessions in accordance with the short-term psychotherapy guideline, namely the seven stages of questions about problems, pressure, challenge,

transient resistance, Direct access to non-compliant, and in accordance with the Psychiatry Handbook of Dynamic Psychiatry (1995) will be administered twice a week for the experimental group in 20 sessions.
