Effect of supportive program on the stress and anxiety of fathers in the first exposure to premature infant

Protocol summary

Study aim

Investigating the impact of supportive program on the stress and anxiety of fathers in the first exposure to preterm infant

Design

Randomized Clinical trial, sample size=80

Settings and conduct

This study is will be conducted in the public hospital of Shahid Motahari, in Urmia. the researcher invites eligible study units to collaborate. The study units, will be divided into intervention and control groups based on randomization. After filling out State-Trait Anxiety (STAI) Inventory, the first encounter of the father with the infant was established based on the mother's placement, in interventional or control group based on randomization. After intervention, Parental Stressor Scale: Neonatal Intensive Care Unit (PSS-NICU) and STAI Inventories will be filled.

Participants/Inclusion and exclusion criteria

Fathers of preterm infants

Intervention groups

In the intervention group, two albums with the photos of a preterm babies will be shown to the father, and will be trained how to store and transport the breast milk, Then the father will be taken to the infant's bedside and empowered to have a comfortable interaction with the infant, then characteristics of premature infants and equipment around the baby and unit routine will be explained simply. At the end, DVD and pictorial training booklets on preterm infant's characteristics, will be given to the father, and the researcher's telephone number will be given to father to ask any possible question. In the control group, the father goes to the baby's bed and the baby's nurse answers any questions.

Main outcome variables

Stress, anxiety

emphasized on trust, resort, patience, and submission to divine fate (spiritual support), and then the mother's milk storage and transportation will be taught and taught. The device tries, while supporting information, with the hope that our premature infant will eat our milk. There will also be emotional support for the father, at which point the father will be advised to enter the ward and, as he enters, the staff will be introduced to him, followed by the father to the infant's bed, and to engage in sedentary interactions with him. The baby is encouraged and empowered through continuous gentle touch, gentle whispering in the ear, and eye contact. Alongside the baby, the characteristics of the premature baby and the equipment around the premature baby will be explained in a simple, understandable language and will answer any further questions the father has about the baby, the environment and the routine equipment. At the end of the illustrated booklet and DVD, information will be provided to the father on the conditions and characteristics of preterm infants, the needs and alternatives of indirect and indirect nutrition, the general conditions and common problems of preterm infants for the next 3 days and during hospitalization. Their infants can use it and revive it in their minds if they forget to read and observe some topics. The father will also be given a telephone number to answer any questions he may have during these 3 days. On the third day, the father's anxiety questionnaire for the second time and the stress questionnaire for the first time.
