Comparing the Effectiveness of Cognitive- Behavioral Therapy and Emotion- Focused Therapy on Resiliency, Tolerance of Distress and Quality of Life in Patients with Irritable Bowel Syndrome

Protocol summary

Study aim

Comparison of the efficacy of emotion-focused and cognitive-behavioral therapy in resilience and distress tolerance and quality of life in patients with irritable bowel syndrome

Design

The clinical trial has a parallel and control intervention group, not blinded and randomized.

Settings and conduct

At Masoud Gastroenterology Clinic, patients who were diagnosed with a Quarterly Doctor with Irritable Bowel Syndrome were asked to complete the questionnaires if they were satisfied with the conditions of the trial. In the three stages of pre-test, post-test, and follow-up, the impact of protocol on emotional and cognitive behavioral therapies is examined

Participants/Inclusion and exclusion criteria

Inclusion criteria: having diagnostic criteria for irritable bowel syndrome with the approval of a gastroenterologist; lack of psychological drugs over the past three months; tendency to participate in the program; have a high school diploma; over 20 years of age; no drug addiction; commitment to attending therapy sessions; low Assessment of Resiliency Questionnaire and Tolerance and Quality of Life Questionnaire in patients with irritable bowel syndrome. Exclusion criteria: having a family history of colon cancer; taking psychiatric drugs; having colon cancer; not wanting to participate in the research project.

Intervention groups

Cognitive-behavioral treatment protocol to the first experimental group to enhance resilience and tolerance of distress and improve quality of life in patients with irritable bowel syndrome. She has irritable bowel syndrome. Control group without any intervention.

Main outcome variables

Resilience based on Connor-Davidson Resilience Scale;

Distress Tolerance based on Simmons & Ganer Distress Tolerance Scale; Quality of Life based on Quality of Life Questionnaire for Irritable Bowel Syndrome Patients

Randomized

Randomization description

Subjects will be selected by purposeful sampling. In the first consultation session after structured clinical interview with patients and considering inclusion and exclusion criteria, eligible patients will be asked to complete Connor-Davidson Resilience Scale, Simmons& Ganer Distress Scale. The quality of life of patients with irritable bowel syndrome respond. After the initial evaluation of the patients, the patients who received the lowest mean in these questionnaires, 45 patients were selected and randomly divided into three groups of 15 experimental subjects, the first group cognitive behavioral therapy, the second group emotional therapy and control group. They will be divided. Then the first and second groups will be given eight sessions of 90 minutes once a week, and the control group will receive no intervention. After the intervention sessions, the questionnaires will be given to the patients as post-test

and 3 months later for follow up in all 3 groups and the results of the groups will be compared again.

Intervention groups

1

Description

Cognitive behavioral therapy intervention group. The treatment model used in Cognitive-Behavioral Therapy was based on a general pattern of available resources, considering the nature and nature of irritable bowel syndrome in Iranian patients, and applied behavioral and educational methods. Treatment sessions consist of 8 sessions of once a week for one hour and a half with the purpose of identifying unpleasant thoughts and cognitive errors, reducing stress, increasing resiliency, increasing distress tolerance, improving patients' quality of life and ultimately preventing relapse. It was a disease. Overall Session 1 includes focusing on evaluating, identifying and articulating the goals of Cognitive Behavioral Therapy, and Sessions 2 to 8 including feedback from the previous session, assignment review, discussion of assignment, goal setting, key issues presentation, information on IBS related problems, Identifying and introducing behaviors that affect the severity of IBS symptoms and related cognitive strategies, training stress management techniques and skills were required. At the end of each session, patients were given a summary of the same session and homework assignments.
