Comparative effect of peer-based education using mobile phone and face-to-face education on fear of childbirth in primigravida women in comprehensive health centers

Protocol summary

Study aim

Comparison of the effect of peer education based on mobile phone use and face to face training on fear of childbirth in the first pregnant women referred to Meshginshahr comprehensive health centers

Design

Experimental trial with three groups, control group, face-to-face training and mobile phone training by peers on the first 60 pregnant women 24-34 weeks, SPSS 16 software is used to evaluate the results.

Settings and conduct

First pregnant women 24-34 weeks referring to comprehensive health centers who have obtained a score of 80-100 in the fear of childbirth in the questionnaire of fear of childbirth are included in the study. Individuals are divided into three groups: one control group and two intervention groups 1 and 2. The results will be evaluated immediately after the intervention and one month later. The control group receives only routine care.

Participants/Inclusion and exclusion criteria

Inclusion criteria Literacy of Persian, age range 18 to 35 years Being pregnant first, Gestational age 24 to 32 weeks No stressful events in the last 6 months Lack of medical indication for cesarean section No underlying mental illness Having a mobile phone, internet connection, ability to use WhatsApp application. Earn a score of 85 and above on the Fear of Childbirth Questionnaire Exclusion criteria Increased disease in pregnancy Any complication in pregnancy such as high blood pressure during pregnancy, premature rupture of the bladder, premature birth Lack of contact information Mental illness

Intervention groups

Intervention group 1 receives six 90-minute face-to-face training sessions in health centers Intervention group 2 receives six 90-minute training sessions through

WhatsApp The control group receiving routine pregnancy care

Main outcome variables

Fear of childbirth Pregnancy anxiety

Groups that have been masked
No information

Sample size
Target sample size: **66**

Randomization (investigator's opinion)
Randomized

Randomization description
In the study groups, Random allocation will be made with blocking methods. First, all possible combinations of AABCC blocks will be listed, one code will assign to each of them, and then 11 codes will be select randomly. They will be Blind to ensure that there is no bias. After selecting them, go to the blocks corresponding to each code, and then according to the available combinations, people will enter the study groups.

Blinding (investigator's opinion)

Health conditions studied

1

Description of health condition studied

Fear of childbirth

ICD-10 code

ICD-10 code description

Primary outcomes

1

Description

Childbirth Fear Score in the Vija Birth Fear Questionnaire

Timepoint

Pre-test (before the start of the intervention), post-test (immediately after the intervention), follow-up (one month after the intervention)

Method of measurement

General score obtained from the Vija A Fear of Childbirth Questionnaire

2

Description

Pregnancy Anxiety Score in Shortened Questionnaire Pregnancy Anxiety Wendenberg

Timepoint

Pre-test (before the start of the intervention), post-test (immediately after the intervention), follow-up (one month after the intervention)

Method of measurement

The total score obtained from the abbreviated questionnaire of Wendenberg

Secondary outcomes

1

Description

Fear of childbirth

Timepoint

Follow-up test (one month after the last intervention session)

Method of measurement

The overall score obtained from the Vajima Birth Fear Questionnaire

2

Description

Pregnancy Anxiety

Timepoint

Follow-up test (one month after the last intervention session)

Method of measurement

The overall score obtained in the shortened Wondenberg Pregnancy Anxiety Questionnaire

Intervention groups

1

Description
