Clinical Trial Protocol
Iranian Registry of Clinical Trials

09 Nov 2026

Treatment of COVID-19-induced cytokine storm with filter hemoperfusion HA330

Protocol summary

Study aim
To determine the effectiveness of hemoperfusion to remove cytokines-induced by COVID-19 in the blood

Design
A clinical trial, with one intervention group, with no control group, without blindness, ten patients with severe forms of COVID-19, Phase 2.

Settings and conduct
This study will be performed in Imam Reza Hospital, Tabriz, Iran. This clinical trial will be conducted on one intervention group, with no control group and no blindness on 10 hospitalized patients admitted with severe forms of COVID-19 and before intubation.CT scan of lungs, biochemical tests, hospitalization period, need to intubation and mortality rate will be assessed in this group.

Participants/Inclusion and exclusion criteria
Inclusion criteria: Patients with severe cytokine storm and respiratory symptoms (ARDS); Patients with a respiratory rate of more than 30; PaO2/FiO2 less than 300 mm Hg; Age 18-65 year؛ immediate need for intubation. Exclusion criteria: advanced multi-organ failure; coagulation abnormality; other viral infection and bacterial sepsis; plasma platelets count less than 30000 per microliter.

Intervention groups
Intervention group: Patients undergo dialysis on 2 sessions 4 hours with hemoperfusion HA330 filter. The second course of hemoperfusion is performed 18-24 hours after the first session.

Main outcome variables
The change of pneumonia severity on CT scanning; ARDS symptoms; mortality rate; hospitalization period

Scientific title
Treatment of COVID-19-induced cytokine storm with filter hemoperfusion HA330

Public title

Treatment of COVID-19-induced cytokine storm by hemoperfusion

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Positive PCR for COVID-19 PaO2/FiO2 less than 200 mmHg More than 50% involvement of pulmonary fields in CT scan Respiratory rate more than 30/minute Resting O2 saturation less than 90%

Exclusion criteria:

Coagulation abnormality Plasma platelets count <30000/µL Other viral infection and bacterial sepsis Advanced multi-organ failure

Age

From **18 years** old to **65 years** old

Gender

Both

Phase

2

Groups that have been masked

J12.81

ICD-10 code description

Pneumonia due to SARS-associated coronavirus

Primary outcomes

1

Description

The general condition of the patient

Timepoint

Before intervention and 1 day after final intervention

Method of measurement

Lung CT scan; No need to receive any intensive respiratory care in the patient

2

Description

Mortality rate

Timepoint

At baseline and discharge time or patient death

Method of measurement

Observation

3

Description

Need for intubation

Timepoint

Period of hospitalization

Method of measurement

Observation or reading of hospitalized documents

4

Description

Period of hospitalization

Timepoint

At baseline and discharge time

Method of measurement

Number of hospitalized days

Secondary outcomes

empty

Intervention groups

1

Description
Intervention group: Patients undergo hemodialysis on 2 sessions, each session will be conducted in 4 hours using hemoperfusion HA330 filter (JAFRON BIOMEDICAL.CO.LTD, China). The second round will be performed 18-24 hours after the first time. Protocol: a blood flow 150cc/minute, Heparin 10-12 unit per kg per hour.
