Clinical Trial Protocol
Iranian Registry of Clinical Trials

25 Oct 2020

Evaluation of the efficiency and safety of favipiravir + hydroxychloroquine drug regimen in comparison with hydroxychloroquine in hospitalized patients with covid-19

Protocol summary

Study aim

determination of the efficiency and safety of favipiravir+hydroxychloroquine in comparison with hydroxychloroquine in hospitalized patients with covid-19

Design

Clinical trial with control group, double-blind, randomized, phase 3 on 50 patients. Table of random numbers are used for randomization.

Settings and conduct

The study is performed in the wards of Shahid Modarres Hospital. Participants, clinical care providers and evaluators of final outcomes are blinded.

Participants/Inclusion and exclusion criteria

Inpatients with COVID-19 in Shahid Modarres Hospital who have the conditions to enter the study: Inclusion Criteria: -Respiratory Rate(RR)≥30 /min -SpO2<93% on room air -PaO2/FIO2<300 -CT scan Involvement>50% - Diagnosis confirmed by CPR or CT scan -Age more than 18 years - Obtaining the written informed consent from the patient or his/her legal guardian to participate in the clinical trial Exclusion Criteria: -G6PD Deficiency -QT interval more than 450 milliseconds -myasthenia gravis - Pregnancy- Breast Feeding -Severe Renal or Hepatic Failure

Intervention groups

Dosage of the drug in the intervention group: 1600 mg of Favipiravir BD on the first day, 600 mg of Favipiravir BD on the second to fifth day, and concurrent 400 mg of hydroxychloroquine BD on the first day, and 200 mg BD daily on the second to fifth day . The two groups will receive standard treatment (oxygen and, if necessary, antibiotics). Dosage of the drug in the control group: hydroxychloroquine drug 400 mg BD on the first day and 200 mg hydroxychloroquine BD daily on the second to fifth day. Increase the duration of treatment to 10 days according to the doctor's order. The control group will receive placebo instead of Favipiravir.

Main outcome variables

- Discharge criteria include: no fever for 3 days, SpO2> 93%, relative improvement in CXR - All cause Mortality - Need to Mechanical ventilation -Drug Adverse Effect

Scientific title
Evaluation of the efficiency and safety of favipiravir + hydroxychloroquine drug regimen in comparison with hydroxychloroquine in hospitalized patients with covid-19

Public title
Evaluation of the efficiency and safety of favipiravir + hydroxychloroquine drug regimen in comparison with hydroxychloroquine in hospitalized patients with covid-19
Purpose
Treatment
Inclusion/Exclusion criteria
Inclusion criteria:
a- Respiratory Rate(RR)≥30 /min b- SpO2<93% on room air c- PaO2/FIO2<300 d- CT scan Involvement>50% e- Diagnosis confirmed by CPR or CT scan f- Age more than 18 years
Exclusion criteria:
a- G6PD Deficiency b- QT interval more than 450 milliseconds c- myasthenia gravis d- Pregnancy- Breast Feeding e- Severe Renal or Hepatic Failure
Age
From **18 years** old
Gender
Both

Phase
3
Groups that have been masked

- Participant
- Care provider
- Outcome assessor

Sample size
Target sample size: **50**
Randomization (investigator's opinion)
Randomized
Randomization description
Simple randomization, Random Number Table
Blinding (investigator's opinion)
Double blinded
Blinding description
Participants, health care personnel and evaluators of the final outcome are unaware of the drug given to the intervention and control group .
Placebo
Used
Assignment
Parallel
Other design features

Health conditions studied

1

Description of health condition studied
COVID-19
ICD-10 code
COVID-19
ICD-10 code description
U07.1 - COVID-19

Primary outcomes

1

Description
No fever for 3 days
Timepoint
Daily
Method of measurement
Medical Records

2

Description
- SpO2>93%
Timepoint
daily
Method of measurement
Medical Records

3

Description
CXR observation
Timepoint
After the end of the treatment period
Method of measurement
Observation

Secondary outcomes

1

Description
- All cause Mortality
Timepoint
once
Method of measurement
Medical Records

2

Description
- Need to Mechanical ventilation
Timepoint
Daily
Method of measurement
Medical Records

3

Description
Drug Adverse Effect
Timepoint
Daily

Title and more details about the data/document
Data can be shared after deleting participants' names.
When the data will become available and for how long
The access period will be started six months after the publication of the article.
To whom data/document is available
The data will be available only for academic researchers.
Under which criteria data/document could be used
Only meta-analysis in collaboration with the current study research team will be permitted.
From where data/document is obtainable
Researchers can request data by emailing Dr.Mohammad Fathi(m.fathi@sbmu.ac.ir)
What processes are involved for a request to access data/document
Requested data will be sent by email after consideration and approval by the relevant authorities from Shahid beheshti university.
