Clinical Trial Protocol
Iranian Registry of Clinical Trials

19 Jun 2026

Investigation of the effects of COVID-19 convalescent plasma in acute respiratory distress syndrome due to COVID-19

Protocol summary

Study aim
Determination of the effects of COVID-19 convalescent plasma in acute respiratory distress syndrome due to COVID-19

Design
Present study is randomized, parallel, clinical trial.

Settings and conduct
the present study will be done in hospitalized COVID-19 patients at Urmia University of Medical Sciences hospitals. patients divided into 3 groups that will receive standard treatment and 2 of them will receive different doses of convalescent plasma.

Participants/Inclusion and exclusion criteria
1-Positive PCR test 2-dyspnea 3-respiratory frequency ≥ 30/min 4-blood oxygen saturation ≤ 93% 5-the partial pressure of arterial oxygen to fraction of inspired oxygen ratio < 300 6-lung infiltrates > 50% within 24 to 48 hours 7- The life-threatening disease is defined as respiratory failure

Intervention groups
1-control group: standard treatment 2-first interventional group: 2-5 cc/kg convalescent plasma (days 1,3,5) 3-second interventional group: 8-10 cc/kg convalescent plasma (day 1)

Main outcome variables
hospitalization time, ICU admission time, mechanical ventilation time, survival rate.

General information

Reason for update

Acronym
COVID-19

IRCT registration information
IRCT registration number: **IRCT20200501047258N1**
Registration date: **2020-05-04, 1399/02/15**

Scientific title
Investigation of the effects of COVID-19 convalescent plasma in acute respiratory distress syndrome due to COVID-19

Public title
effects of convalescent plasma in COVID-19

Purpose
Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Positive PCR test The life-threatening disease is defined as respiratory failure dyspnea respiratory frequency ≥ 30/min blood oxygen saturation ≤ 93% partial pressure of arterial oxygen to fraction of inspired oxygen ratio < 300 lung infiltrates > 50% within 24 to 48 hours

Exclusion criteria:

Pregnancy Hypersensitivity to blood or blood products Uncontrolled bacterial infection Disagreement

Age

No age limit

Gender

Both

Phase

2-3

Groups that have been masked

No information

Sample size

Target sample size: **120**

More than 1 sample in each individual

Number of samples in each individual: **5**

CD4, CD8 Lymphocytes/ IL-6, TNF/ Plt/ Hb/ WBC/ Lymphocytes/ Neutrophils/ BUN/ Cr/ AST/ ALT/ ALP/ Bill (T,D)/ Vitamin D/ D-dimer

Randomization (investigator's opinion)

Randomized

Randomization description

We use block randomization and according to the study design patients will be divided into two groups (severe and critical). firstly, we will create two separate blocks size equal to 6 (AABBCC). Secondly, we will list all permutation of them and assigned code for each permutation. We will select 10 blocks using a simple random method for two study groups (severe and critical).

Blinding (investigator's opinion)

Not blinded

Blinding description

Placebo

Health conditions studied

1

Description of health condition studied

COVID-19

ICD-10 code

U07.1

ICD-10 code description

COVID-19

Primary outcomes

1

Description

Hospitalization time

Timepoint

0, 1, 3, 7, 14 days

Method of measurement

check list

2

Description

ICU admission time

Timepoint

0, 1, 3, 7, 14 days

Method of measurement

check list

3

Description

mechanical ventilation time

Timepoint

0, 1, 3, 7, 14 days

Method of measurement

check list

4

Description

survival rate

Timepoint

0, 1, 3, 7, 14 days

Method of measurement

check list

Secondary outcomes

1

Description

CT scan

Timepoint

0- 1- 3- 7- 14 days

Method of measurement
CT scan

2

Description
serological tests
Timepoint
0- 1- 3- 7- 14 days
Method of measurement
ELISA

3

Description
hematological markers
Timepoint
0- 1- 3- 7- 14 days
Method of measurement
flowcytometry

4

Description
clinical findings
Timepoint
0- 1- 3- 7- 14 days
Method of measurement
check list

Intervention groups

1

Description
Intervention group 1: hospitalized patients received convalescent plasma with 2-5 cc/kg transfused on 1, 3, 5 days after treatment that treated with the standard national guideline.
Category
Treatment - Drugs

2

Description
Intervention group 2: hospitalized patients received convalescent plasma with 8-10 cc/kg transfused on 1 day after treatment that treated with the standard national guideline.
Category
Treatment - Drugs

3

Description
Control group: hospitalized patients treated with the standard national guideline.
Category
Treatment - Drugs
