

# Clinical Trial Protocol

## Iranian Registry of Clinical Trials

04 Dec 2023

### Investigating the efficacy of high dose of glucocorticoid in patients with moderate to severe pneumonia related to COVID-19

#### Protocol summary

##### Study aim

Investigating the efficacy of high dose of glucocorticoids in patients with moderate to severe pneumonia related to COVID-19

##### Design

This study is a single-center, prospective, randomized, open-labeled, controlled, parallel phase 3 clinical trial.

##### Settings and conduct

Patients who is admitted to Baqiyatallah hospital and is meet the inclusion criteria, is entered to the study are randomly assigned into two groups of intervention and control.

##### Participants/Inclusion and exclusion criteria

Inclusion criteria: confirmed diagnosis of COVID-19; the written consciously and freely consent to participate in the study; moderate to severe Corona-Virus associated pneumonia; In the first 48 hours of hospitalization, the patient did not show an improving trend; in the first 48 hours after his/her inclusion, there is no possibility of discharge from hospital; Exclusion criteria: history of hypersensitivity reaction to glucocorticoids; recent hospitalization due to COVID-19; receive antivirals before inclusion; receiving Methylprednisolone pulse before inclusion; uncontrolled severe chronic illnesses, including HF, CKD, liver failure, active cancer, DM; receiving immunosuppressing/modulating agents; pregnancy; lactation.

##### Intervention groups

Intervention group: at Day 1: Amp. Methylprednisolone 500 mg IV infusion over 1 hour. At Day 2 and 3, Amp. Methylprednisolone 250 mg IV infusion over 1 hour. At Day 4 and 5, Amp. Methylprednisolone 100 mg IV infusion over 1 hour. Then, Tab. Prednisolone 25 mg, per oral, daily, until the day of discharge, then Tab. Prednisolone will gradually taper off over during 1 month. Control group: Includes patients who will not receive high-dose of glucocorticoids during hospitalization. All patients in both groups receive routine treatment according to the latest national guideline.

#### Main outcome variables

Need to receive ICU service

**Scientific title**  
Investigating the efficacy of high dose of glucocorticoid in patients with moderate to severe pneumonia related to COVID-19

**Public title**  
Investigating the efficacy of high dose of glucocorticoid in patients with moderate to severe pneumonia related to COVID-19

**Purpose**  
Treatment

**Inclusion/Exclusion criteria**  
**Inclusion criteria:**  
Confirmed diagnosis of COVID-19, with either lung CT-Scan result, which is typical for COVID-19 pulmonary involvement, or RT-PCR confirmation. The patient has written consciously and freely consent to participate in the study; The patient has moderate to severe Corona-Virus associated pneumonia; In the first 48 hours of hospitalization, the patient did not show an improving trend; In the first 48 hours after his/her inclusion into this study, there is no possibility of discharge from the patient's hospital;  
**Exclusion criteria:**  
History of hypersensitivity reaction to glucocorticoids; Recent hospitalization and treatment history due to COVID-19; Receive antiviral drugs before including into this study, such as: Hydroxychloroquine, Kaletra, Ribavirin, Oseltamivir; Receiving Methylprednisolone pulse before including into this study; Uncontrolled severe chronic illnesses, including heart failure, kidney failure, liver failure, active cancer (history of chemotherapy within recent month), diabetes; Receiving immunosuppressing /immunomodulating agents, such as systemic glucocorticoids. Pregnancy; Lactation.

**Age**  
From **18 years** old to **85 years** old

**Gender**  
Both

**Phase**  
3

**Groups that have been masked**  
*No information*

**Sample size**  
Target sample size: **50**

**Randomization (investigator's opinion)**  
Randomized

**Randomization description**  
Block Randomization method is used to randomized the patients. In this method, the number of people assigned to each group is usually almost equal. Blocks are formed based on the considered variables and within each block, half of the people are involved and half are considered as witnesses. The main goal in this method is to balance the number of participants in each group.

**Blinding (investigator's opinion)**  
Not blinded

**Blinding description**

**Placebo**  
Not used

**Assignment**  
Parallel

**Other design features**

#### Approval date

2020-04-19, 1399/01/31

#### Ethics committee reference number

IR.BMSU.REC.1399.099

## Health conditions studied

### 1

#### Description of health condition studied

COVID-19

#### ICD-10 code

U07.1

#### ICD-10 code description

Covid-19

## Primary outcomes

### 1

#### Description

Need to receive ICU service (occurrence of shock, resistant hypoxemia despite receiving oxygen via reservoir oxygen mask, GCS score drops below 12)

#### Timepoint

The patient is monitored every 6 hours, but the results are recorded daily in the checklist.

#### Method of measurement

Physical assessment

## Secondary outcomes

## 1

### **Description**

Mortality rate

### **Timepoint**

30 days after including the study

### **Method of measurement**

Physical assessment

## 2

### **Description**

Length of hospitalization

### **Timepoint**

The first day and the end of hospitalization

### **Method of measurement**

The hospital record review

## 3

### **Description**

Radiologic response

### **Timepoint**

At the admission, before the discharge

### **Method of measurement**

CT-SCAN

## 4

### **Description**

Laboratory changes

### **Timepoint**

Daily

### **Method of measurement**

Blood sample, laboratory analysis

## 5

### **Description**

Fever

### **Timepoint**

Daily

### **Method of measurement**

Thermometer

## 6

### **Description**

Respiratory distress

### **Timepoint**

Daily

### **Method of measurement**

Clinical assessment

## 7

### **Description**

Oxygen saturation without receiving oxygen supplement

### **Timepoint**

It will be measured every 6 hours, but will be recorded daily.

### **Method of measurement**

Pulse-oxymetry device

## 8

### **Description**

The amount of oxygen received

### **Timepoint**

It will be measured every 6 hours, but will be recorded daily.

### **Method of measurement**

The volume of oxygen consumed through the oxygen mask /Ventilation Volume via Mechanical Ventilation Machine or BiPAP

## 9

### **Description**

Discharge without the need of ICU service

### **Timepoint**

At discharge time

### **Method of measurement**

Physical assessment

## 10

### **Description**

Pulmonary function changes

### **Timepoint**

6 week later after discharge

### **Method of measurement**

Spirometry

## 11

### **Description**

Rate of readmission

### **Timepoint**

until 2 months after discharge

### **Method of measurement**

The hospital record review

## 12

### **Description**

Side effects

### **Timepoint**

Daily during hospitalization, weekly after discharge

### **Method of measurement**

During hospitalization by clinical evaluation, after discharge by telephone follow-up

## **Intervention groups**

## 1

### **Description**

Intervention group: At Day 1: Amp. Methylprednisolone 500mg IV infusion over 1 hour. At Day 2 and 3, Amp. Methylprednisolone 250mg IV infusion over 1 hour. At Day 4 and 5, Amp. Methylprednisolone 100mg IV infusion over 1 hour. Then, Tab. Prednisolone 25mg, per oral, daily, until the day of discharge, then Tab. Prednisolone will gradually taper off over during 1 month. All patients will receive routine treatment according to the latest national guideline.

**Category**

Treatment - Drugs

**2****Description**

Control group: Includes patients who will not receive high-dose of glucocorticoids during hospitalization. All patients will receive routine treatment according to the latest national guideline.
