Evaluation of effect of hydroalcoholic extract of trifolium plant in patients with subclinical hypothyroidism

Protocol summary

Study aim

Evaluation of effect of hydroalcoholic extract of trifolium plant in patients with subclinical hypothyroidism

Design

This clinical trial was performed on 40 patients, divided into two groups of 20, including a control group and parallel groups. This study is blinded and simple randomization is used.

Settings and conduct

The field of work is clinical - internal. This study is performed in the Tohid Hospital in Sanandaj. The intervention group is given a 500 mg capsule of hydroalcoholic extract of trifolium plant daily for three months, along with standard treatment. The control group is also given a daily placebo for three months, along with standard treatment.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Patients with lately diagnosed subclinical hypothyroidism

Intervention groups

Intervention group: hydroalcoholic extract of trifolium plant, oral capsule, 500 mg, Once a day for three months with standard treatment Control group: placebo containing starch, oral capsule, 500 mg, Once a day for three months with standard treatment

Main outcome variables

Serum TSH levels; Serum T4 levels; Serum T3 levels

Scientific title

Evaluation of effect of hydroalcoholic extract of trifolium plant in patients with subclinical hypothyroidism

Public title

Evaluation of effect of trifolium plant on hypothyroidism

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Patients with lately diagnosed subclinical hypothyroidism

Exclusion criteria:

Thyroiditis Pregnancy Cardiovascular disease Thyroid cancer Recent surgery Blood disorders children Breastfeeding chronic Diseases Dissatisfaction patients to participate in the study	Name of ethics committee Ethics committee of Kurdistan University of Medical Sciences
Age From 18 years old to 70 years old	Street address Vice Chancellor for research of Kurdistan University of Medical Sciences, Pasdaran Blvd, Sanandaj, Iran.
Gender Both	City Sanandaj
Phase 3	Province Kurdistan
Groups that have been masked • Participant • Care provider • Investigator • Outcome assessor • Data analyser	Postal code 66177-13446
Sample size Target sample size: 40	Approval date 2019-03-16, 1397/12/25
Randomization (investigator's opinion) Randomized	Ethics committee reference number IR.MUK.REC.1397/384
Randomization description Using block randomization method with a block size of 4. Sampling method at this study will be according to random allocation. Participants will enter the study according to inclusion criteria, and then will be divided into two groups according to randomization table. One group will receive (Capsule containing hydroalcoholic extract of trifolium plant) and the other will receive placebo. The participants and administrator do not have any information about content of capsules (double blinded study). The list of randomization was computer-generated. supplements and placebo capsules were placed in completely identical packages and were coded by someone who was unaware of the nature of the study in numbered bottles based on the list. And another person who was unaware of the contents of the pack provided them to the patients.	Health conditions studied 1 Description of health condition studied Subclinical hypothyroidism ICD-10 code E02 ICD-10 code description Subclinical iodine-deficiency hypothyroidism
Blinding (investigator's opinion) Double blinded	Primary outcomes 1 Description Serum TSH levels Timepoint Measurement of TSH levels before the intervention and three months later Method of measurement Serum level evaluation
Blinding description All supplements and placebo capsules were identical with respect to appearance and only differed in coding of the capsules. The treatment code of the intervention supplements was blinded for subjects, investigators and staff involved in the conduct of the study.	2 Description Serum T4 levels Timepoint Measurement of T4 levels before the intervention and three months later Method of measurement Serum level evaluation
Placebo Used	3 Description Serum T3 levels Timepoint Measurement of T3 levels before the intervention and three months later Method of measurement Serum level evaluation
Assignment Parallel

Intervention groups

1

Description

Intervention group: Capsule containing hydroalcoholic extract of trifolium plant at a dose of 500 mg per day for three consecutive months. These oral capsules of trifolium plant are prepared by a reputable pharmacist.

Category

Placebo

2

Description

Control group: Placebo in capsules at a dose of 500 mg per day for three consecutive months. These placebo oral capsules contain starch and are prepared by a reputable pharmacist.
