comparative study of the effect of analgesia of preemptive and postoperative Transversalis Abdominis plane block under ultrasound guidance in patients undergoing elective laparoscopic Cholecystectomy.

Protocol summary

Study aim

comparative study of the effect of analgesia of preemptive and postoperative Transversalis Abdominis plane block under ultrasound guidance in patients undergoing elective laparoscopic Cholecystectomy.

Design

This study is a single blind clinical trial in which the number of patients is determined according to the sample size formula and a simple randomization method is used, and using a table of random numbers, patients are assigned to two treatment groups. The sample size in this study is 76 patients, which are divided into two groups of 38.

Settings and conduct

This study is performed in Rasoul Akram Hospital in Tehran and after obtaining patient satisfaction and approval of the ethics committee, patients are randomly divided into two groups. In the first group, After anesthetizing the patient, the Transverse Abdominis block is performed with Ropivacaine before performing laparoscopic cholecystectomy, and in the second group, sensory block is performed after the Surgery. This study is single blind and the person analyzing the information is unaware of the study groups.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Patients aged 20-60 years under Laparoscopic Cholecystectomy, Patients with ASA 1 & 2 anesthesia score Exclusion criteria: History of Ropivacaine allergy, Patients with BMI > 40, Emergency patients

Intervention groups

After patient satisfaction and the approval of the ethics committee, patients are randomly divided into two groups. In the first group, the patient is first anesthetized, and then the Transverse Abdominis block is performed with Ropivacaine before performing Laparoscopic cholecystectomy, and in the second group,

Regional block is performed after the Surgery.

Main outcome variables

Pain, Nausea, Vomiting

General information

Reason for update

The sample size written (58 patients: 29 in each group) is not correct and in fact 76 patients and 38 patients in each group is correct.

Scientific title

comparative study of the effect of analgesia of preemptive and postoperative Transversalis Abdominis plane block under ultrasound guidance in patients undergoing elective laparoscopic Cholecystectomy.

Public title

Comparison of regional anesthesia on pain control in Cholecystectomy surgery with two methods before and after surgery.

Purpose

Treatment

Inclusion/Exclusion criteria**Inclusion criteria:**

Patients aged 20-60 years under Laparoscopic Cholecystectomy Patients with ASA 1 & 2 Anesthesia score

Exclusion criteria:

History of Ropivacaine allergy. Patients with BMI> 40. Emergency patients

Age

From **20 years** old to **60 years** old

Gender

Both

Phase

Randomization (investigator's opinion)

Randomized

Randomization description

For randomization, a simple randomization method is used, which is done using a table of random numbers. To use the number of random numbers, we first determine the reading path of the table numbers (for example, top, bottom, left or right). Then we assume certain numbers for each group (for example, even numbers for intervention A and odd numbers for intervention B). Then we touch on one of the numbers and move in one of the predetermined directions and record the numbers and assign them to different groups.

Blinding (investigator's opinion)

Single blinded

Blinding description

In this study, a person who is responsible for analyzing statistical data is not aware of the treatment process and study groups and the information is provided to that person in groups A and B.

Intervention groups

1

Description

Intervention group: In the first group, after induction of general anesthesia and in sterile conditions in the supine position (SUPINE) with linear probe of ultrasound (SonoSite made in USA) and with sterile syringe with 20 cc of Ropivacaine 0.25% in each part (Ropivacaine maylan made in france) and with Spinal needles No. 23 (dr japan) are blocked.
