Iranian Registry of Clinical Trials

30 May 2026

Evaluation efficacy of "Curcumin and Resveratrol" capsule in controlling symptoms in patients with COVID-19

Protocol summary

Study aim

Evaluation efficacy of 'Curcumin and Resveratrol' Capsule in controlling symptoms in patients with COVID-19

Design

This study is a single-center, prospective, randomized, open-labeled, controlled, parallel phase 3 clinical trial.

Settings and conduct

Patients who is admitted to Baqiyatallah hospital, and is met the inclusion criteria, will be participated to the study, and randomly be assigned into intervention and control group.

Participants/Inclusion and exclusion criteria

Inclusion criteria: age equal or more than 18 years; The patient have written consciously and freely consent to participate in the study. The patient's clinical symptoms (dry cough, shortness of breath, fever) confirm COVID-19. Confirmed diagnosis of COVID-19, with either lung CT-Scan result, which is typical for COVID-19 pulmonary involvement, or RT-PCR confirmation. Less than 7 days have passed since the onset of symptoms
Exclusion criteria: history of allergy to ingredients; hypersensitivity reaction while taking drug; The patient is participated in another clinical trial at the same time; The patient needs to receive medical care from the intensive care unit.

Intervention groups

Intervention group: "Curcumin and Resveratrol" Capsule 500 mg, 1 Cap. every 12 hours for 7 days (In addition to routine treatment according to the latest national guideline for the treatment of new corona-virus). Control group: routine treatment according to the latest national guideline for the treatment of new corona-virus.

Main outcome variables

Clinical symptoms changes (dry cough, respiratory distress, fever)

Randomization (investigator's opinion)

Randomized

Randomization description

Block Randomization method is used to randomized the patients. In this method, the number of people assigned to each group is usually almost equal. Blocks are formed based on the considered variables and within each block, half of the people are involved and half are considered as witnesses. The main goal in this method is to balance the number of participants in each group.

Blinding (investigator's opinion)

Description of health condition studied

COVID-19

ICD-10 code

U07.1

ICD-10 code description

Covid-19

Primary outcomes

1

Description

Clinical symptoms (dry cough)

Timepoint

Daily monitoring, but the result of baseline (before the initiation of intervention), and day 7 from the initiation, is recorded.

Method of measurement

Physical examination, questionnaire

2

Description

Clinical symptoms (respiratory distress)

Timepoint

Daily monitoring, but the result of baseline (before the initiation of intervention), and day 7 from the initiation, is recorded.

Method of measurement

Pulse-oxymetry device

3

Description

Clinical symptoms (fever)

Timepoint

Daily monitoring, but the result of baseline (before the initiation of intervention), and day 7 from the initiation, is recorded.

Method of measurement

Thermometer

Secondary outcomes

1

Description

Lab. tests changes

Timepoint

Daily monitoring, but the before the intervention initiation (baseline) and day 7 results will recorded on designed checklist.

Method of measurement

Blood sample, laboratory analysis

2

Description

Side effects

Timepoint

Daily monitoring

Method of measurement

Clinical examination

Intervention groups

1

Description

Intervention group: "Curcumin and Resveratrol" Capsule (Each capsule contains 200 mg of curcumin, 200 mg of resveratrol as active ingredients, and 100 mg of lactose as filler), 1 Cap. every 12 hours, for 7 days (In addition to routine treatment according to the latest national guideline for the treatment of new corona-virus).

Category

Treatment - Drugs

2

Description

Control group: routine treatment according to the latest national guideline for the treatment of new corona-virus.

Category

Treatment - Drugs
