The effect of pentaglobin in the treatment of critically ill patients with COVID-19

Protocol summary

Study aim
Evaluation of the efficacy and safety of pentaglobin on patients with COVID-19 infection-induced acute respiratory distress syndrome.

Design
Clinical trial with parallel randomized groups

Settings and conduct
Place of study: Masih Daneshvari Hospital. How to do the study: 30 patients with COVID-19 and other inclusion criteria will be randomly divided in to intervention and control group.

Participants/Inclusion and exclusion criteria
Patients who are diagnosed with COVID-19 by RT-PCR test and are over 18 years old. These patients are included if they have oxygen saturation less than 93%, and not responding to medications in national protocol more than 72 hours, and bilateral pulmonary infiltration.

Intervention groups
In this study patients will receive 5 ml/kg body weight / day Pentaglobin (Biotest company, Germany) for 3 consecutive days with lopinavir-ritonavir (Heterd company, India) at dose of 200/50 mg two tablets BID for 7 days with the standard and supportive care according to national guidelines for COVID-19. Patients in control group only will receive lopinavir-ritonavir (Heterd company, India) at dose of 200/50 mg two tablets BID for 7 days with the standard and supportive care according to national guidelines for COVID-19.

Main outcome variables
Determination of need for supportive treatment with non-invasive oxygen; need for invasive mechanical ventilation; and death.

Scientific title
The effect of pentaglobin in the treatment of critically ill patients with COVID-19

Public title
Pentaglobin effect in critically ill patients with COVID-19

Purpose
Treatment
Inclusion/Exclusion criteria
Inclusion criteria:
Laboratory COVID-19 confirmed with RT-PCR who has acute respiratory distress syndrome Severely ill patient Oxygen saturation < 93% Not responding to national protocol after 72 hours Bilateral pulmonary infiltration Signed the consent form
Exclusion criteria:
Chronic kidney disease (stage 4, 5) Chronic liver disease (Child pugh C) Allergy to human immunoglobulins IgA defficiency
Age
From **18 years** old
Gender
Both

Phase
2-3
Groups that have been masked
No information
Sample size
Target sample size: **30**
Randomization (investigator's opinion)
Randomized
Randomization description
Block randomization method will be used in this study. Six blocks which each block including 5 patients will be generated by online randomization website. In each block 3 patients will be assigned to pentaglobin group and 2 patients will be assigned to control group, and vice versa.
Blinding (investigator's opinion)
Not blinded
Blinding description
Placebo
Not used
Assignment
Parallel

Ethics committee reference number
IR.SBMU.NRITLD.REC.1399.014

Health conditions studied

1

Description of health condition studied
COVID-19 pneumonia
ICD-10 code
U07.1
ICD-10 code description
COVID-19, virus identified

Primary outcomes

1

Description
Need for invasive mechanical ventilation
Timepoint
14 and 28 days after therapy initiation
Method of measurement
Medical record

2

Description
Death
Timepoint
14 and 28 days after therapy initiation
Method of measurement
Medical record

3

Description
Supportive treatment with non-invasive oxygen
Timepoint
14 and 28 days after therapy initiation
Method of measurement
Medical record

Secondary outcomes

1

Description
Hospitalization duration
Timepoint
28 days after admission
Method of measurement
Medical records

2

Description
ventilation duration
Timepoint
7 and 14 days after admission

Method of measurement
Medical record

Intervention groups

1

Description
Intervention group: Patients received 5 ml/kg body weight / day Pentaglobin (Biotest company, Germany) for 3 consecutive days. Patients also received standard treatment and supportive care (oxygen therapy and Anticoagulant) according to national guideline for COVID-19.
Category
Treatment - Drugs

2

Description
Control group: Patients will receive lopinavir-ritonavir (Heterd company, India) at dose of 200/50 mg two tablets BID for 7 days with the standard and supportive care (oxygen therapy and Anticoagulant) according to national guidelines for COVID-19.
Category
Treatment - Drugs
