The effect of educational program using Extended Parallel Process Model on improving breast cancer self-examination behavior in women

Protocol summary

Study aim

Determining the effect of educational program by using Extended Paralle Process Model on promoting breast self-examination behavior in women

Design

A randomized controlled clinical trial in which educational intervention was performed on 40 participants

Settings and conduct

After preparing a list of health centers in the city of Somehsara, select the two centers with the largest population and Sampling is done continuously from both centers and in an accessible manner on different days of the week

Participants/Inclusion and exclusion criteria

Conditions for entering are 20-60 years old, having literacy, and not having a breast self-examination incorrectly or not at all. Conditions of non-inclusion are, pregnancy and lactation, breast disease and other malignancies and a history of malignant breast tumors

Intervention groups

In the intervention and control group, questionnaires is completed before training, immediately after training and 2 months later. Also, the performance checklist of breast self-examination is completed with respect to the privacy of the participants by observing the performance by the researcher, before, immediately and two months after the last training session

Main outcome variables

Perceived threat score, Perceived susceptibility, Perceived severity, Perceived efficiency, Perceived self-efficacy, Perceived response efficacy and The critical point, which predicts behavioral intent. It indicates that the person is in the stage of risk control or fear control.

Scientific title

The effect of educational program using Extended Parallel Process Model on improving breast cancer self-examination behavior in women

Public title

Investigating the effect of Extended parallel process model on breast self-examination behavior

IR.SBMU.PHNM.1395.577

Purpose

Education/Guidance

Inclusion/Exclusion criteria

Inclusion criteria:

Be between 20 and 60 years old Be literate Breast self-examination is done incorrectly or not at all.

Exclusion criteria:

to be during pregnancy and breastfeeding Have history of malignant breast tumors. Have breast diseases and other malignancies.

Age

From **20 years** old to **60 years** old

Gender

Female

Phase

Health conditions studied

1

Description of health condition studied

Educational intervention based on a Extended parallel process model to promote breast self-examination

ICD-10 code

ICD-10 code description

Primary outcomes

1

Description

the average score of perceived threat of women

Timepoint

before the start of the intervention, Immediately and two months after educational intervention

Method of measurement

A researcher-made questionnaire based on Extended parallel process model

2

Description

the average score of women's perceived efficiency

Timepoint

before the start of the intervention, Immediately and two months after educational intervention

Method of measurement

A researcher-made questionnaire based on Extended parallel process model

3

Description

the mean score of women's perceived severity

Timepoint

before the start of the intervention, Immediately and two months after educational intervention

Method of measurement

A researcher-made questionnaire based on Extended parallel process model

4

Description

the mean score of women's perceived susceptibility

Timepoint

before the start of the intervention, Immediately and two months after educational intervention

Method of measurement

A researcher-made questionnaire based on Extended parallel process model

5

Description

the mean score of women's perceived response efficacy

Timepoint

before the start of the intervention, Immediately and two months after educational intervention

Method of measurement

A researcher-made questionnaire based on Extended parallel process model

6

Description

the average score of women's perceived self-efficacy

Timepoint

before the start of the intervention, Immediately and two months after educational intervention

Method of measurement

A researcher-made questionnaire based on Extended parallel process model

7

Description

the average score of women's performance in breast self-examination

Timepoint

before the start of the intervention, Immediately and two months after educational intervention

Method of measurement

A researcher-made questionnaire based on Extended parallel process model

Secondary outcomes

empty

Intervention groups

1

Description

The training package is developed using the opinions of health promotion specialists and reproductive health professionals based on EPPM and its presentation is based on the steps recommended in this model. Educational sessions in the intervention group are held in 4 sessions during 1 month and during 60-minute sessions. Thus, every week, on average, 4, 1-hour sessions are held with the average participation of 7 to 10 people, overall 16 education sessions. Outlines of educational materials are: Breast anatomy, definition of breast cancer and its complications, its causes, introduction of prevention methods and early detection of breast cancer and practical training on the correct method of breast self-examination. In order to better convey and understand the content of educational aids such as anatomical mullage, showing videos using the experiences of people with breast cancer, slides and video projectors that convey the material through lectures and questions and answers are provided.

Category

Prevention

2

Description

At the end of the educational interventions, in order to comply with ethical standards and not deprive the control group of care in one session, a summary of training materials and important points for the control group will be given as a lecture within 20 minutes but without using multiple EPPM steps.

Title and more details about the data/document

This study is an intervention study based on an educational model conducted to promote breast self-examination in women.

When the data will become available and for how long

After the publication of the article, it is available in the relevant journal.

To whom data/document is available

Anyone interested in this research can read the final article.

Under which criteria data/document could be used

For health planners to increase self-care behavior in women in society

From where data/document is obtainable

Email the corresponding author

What processes are involved for a request to access data/document

Explain the reasons for requesting an article in the email.
