Effectiveness of Acceptance and Commitment Group Therapy on control of symptoms, quality of life and mood state in Asthma patients in Isfahan

Protocol summary

Study aim

Determination of the effectiveness of acceptance and commitment therapy on the symptom control, quality of life and mood status of asthmatic patients in Isfahan

Design

Two arms parallel-group randomized trial without blinding on 30 patients. The randomization will be done using Random Allocation software

Settings and conduct

The evaluation of acceptance and commitment therapy on the asthma symptoms, quality of life, and mood disorders will be assessed in asthmatic patients referring to Noor Center. The patients will fill the questionnaires at baseline, at the end of the intervention and within three months. Blinding will not be done in this study.

Participants/Inclusion and exclusion criteria

Inclusion criteria: -Over 18 years old -Documented diagnosis of asthma based on response to bronchodilator -Medical therapy for the least period of three months -Adherence to medical therapy
Unmet criteria: -The diagnosis of psychiatric disorders irrelevant to the underlying asthma -Reluctance to participate in the study

Intervention groups

The intervention group: The asthmatic patients of this group will be trained about the acceptance and commitment therapy for 8 sessions, each endures for 90 minutes and also should administer their asthma-related medical therapies as well. Control group: اهس لقخع خب، حشفهدقس شقت خدمع فقششفئی تیهرشمغ.

Main outcome variables

Asthma symptoms Quality of life Mood status

Actual sample size reached: **30**

Randomization (investigator's opinion)
Randomized

Randomization description
The randomization will be performed through convenience sampling. Therefore, each of the patients will be provided with a particular number using random number table. If the number is even, the patient will be allocated to the intervention group and if odd to the control group.

Blinding (investigator's opinion)
Not blinded

Intervention groups

1

Description

Intervention group: Asthma medical therapy plus Acceptance and Commitment Therapy in which the patients will be trained Acceptance and Commitment Psychotherapy for eight sessions each consisted of 90 minutes plus asthma medication based on the Global Initiative for Asthma protocol in which the patients will

be treated in 4 categories. The ACT consists of sessions, including 1) Primary introduction and introduction of mental abilities (thoughts, feelings, bodily senses, memories, and impulses); 2) the introduction of the control is the problem and the way of reaction to the problems; 3) teaching the difference between pain and suffering and increasing the psychological acceptance and willingness to thoughts and feelings; 4) Clarification of the values and goals and provision of a table in which the values are categorized; 5) teaching the concept of fusion to the mental products and exercises for defusion of the thoughts; 6) teaching the concept of self-conceptualization and how to face this concept; 7) the introduction of commitment and the values of performing purposeful activities; 8) conclusion of the previous 7 sessions and teaching the concept of psychological flexibility.
