The Effectiveness of Self-Healing Training (the Healing Codes) on Pain-Related Anxiety and the Severity of Perceived Pain in Patients with Migraine

Protocol summary

Study aim

The aim of this study was to investigate the effectiveness of self-healing training in pain-related anxiety and the severity of perceived pain in patients suffering from migraine.

Design

In this research a total number of 60 patients were selected as sample according to convenience sampling and based on inclusion and exclusion criteria. They were divided into two experimental and control groups (n=30 per group) through random assignment.

Settings and conduct

Fourteen sessions of self-healing training (once a week and in 90 minutes)

Participants/Inclusion and exclusion criteria

In this research a total number of 60 patients were selected as sample according to convenience sampling and based on inclusion and exclusion criteria. They were divided into two experimental and control groups (n=30 per group) through random assignment. The inclusion criteria were: having the symptoms of migraine for 3 years confirmed through the clinical interview by the clinical specialist, being at the age group between 20 to 40, not having received simultaneous psychological therapies, having finished at least guidance school, and filling out the consent form indicating the knowingly participation. The exclusion criteria were non-cooperation and avoiding doing the presented tasks in sessions, being absent from more than two sessions, suffering from acute or chronic psychological disorders

Intervention groups

The experimental group received fourteen sessions of self-healing training (once a week and in 90 minutes).

Main outcome variables

Pain-Related Anxiety and the Severity of Perceived Pain in Patients with Migraine
