

Clinical Trial Protocol

Iranian Registry of Clinical Trials

17 Jun 2026

Comparison of the Effectiveness of Interventions Based on the Eastern Mind-Body Approach on Cardiovascular Responses and Stress Reduction in prehypertensive Subjects.

Protocol summary

Study aim

Reduces high blood pressure and stress in prehypertensive people

Design

The study samples consisted of 120 prehypertensive males and females selected by purposive sampling according to inclusion and exclusion criteria and were randomly assigned into 8 parallel groups of 15 individuals.

Settings and conduct

The study population included all prehypertensive males and females in Tabriz city in 2020. At first, cardiovascular responses will measure by digital wrist sphygmomanometer. Next, subjects will assigne into 4 experimental and control groups. Then, Mental Pressure Inventory will completed and cardiovascular responses recorded as a pre-test. In the next step, Tai Chi Chuan, yoga, and meditation will be performed for one 30-minute session per week, for a total of 10 weeks, and 24 hours after the end of the course, the dependent variables will be measured.

Participants/Inclusion and exclusion criteria

Inclusion criteria: 1- systolic blood pressure 120 to 139 mmHg, and diastolic blood pressure 80 to 89mmHg 2- Age between 25 to 54 years 3- Adequate literacy for reading and writing 4- Ability to attend the sessions. Exclusion criteria: 1- Sensory-motor disabilities 2- Use of anxiolytic drugs 3- Participation in other treatment sessions simultaneously.

Intervention groups

Tai Chi Chuan: A set of slow, rhythmic, and stretching movements of different parts of the body with deep breathing to achieve physical health and balance of mind and body. Yoga: Ancient Indian practice aimed at balancing the mind and body. Meditation: Repetitive cycles transfer attention from active levels to abstract and subtle levels and reach a state of relaxation, and

return to active levels of thinking. Control group: It do not receive any of the above interventions.

Main outcome variables

systolic blood pressure; diastolic blood pressure; heart rate; stress

Title and more details about the data/document

All data will be presented on average, as our research is a group study.

When the data will become available and for how long

about 2 years

To whom data/document is available

People who work in health areas

Under which criteria data/document could be used

For research, prevention and treatment

From where data/document is obtainable

Davoud Ezzati- University of tabriz- E-mail: ezzatid@yahoo.com

What processes are involved for a request to access data/document

Once the applicant has explained how to use the data in this study along with sufficient documentation, I will deliver the data to him or her within approximately one month.
