

Clinical Trial Protocol

Iranian Registry of Clinical Trials

11 Jul 2026

Evaluation of the Efficacy and safety of Pulsed Electromagnetic Stimulation on the improvement of urinary symptoms in women with urge incontinence, stress incontinence and mixed (urge/stress) incontinence referred to a private urinary incontinence treatment clinic

Protocol summary

Summary

Lower urinary tract symptoms or LUTS is common between women especially in 40-60 years old. There are many therapeutic methods for LUTS and incontinence such as behavioral therapy and biofeedback, pharmacological therapy, electrical stimulation and surgery. There is a new method called pulsed electromagnetic stimulation which seems to be less invasive and while improving symptoms has a positive effect on the quality of life of the patients. This clinical trial will be done on 100 women with urinary incontinence. At least 21 years of age and having reading and writing skills for the participants is required. People with history of known psychological illness will be excluded from the study. The severity of urinary incontinence will be determined by the 4 questions in the standard questionnaire BFLUTS. After that patients will undergo two sessions a week for 6 weeks. Each session will consists of 2 phases for 20 minutes that each will be 10 minutes and there will be 5 minutes of interruption between these 2 phases. The device will be used as a chair (NOVAmag NT-60) and the patient will sit on the chair and blow to the patient. After treatment, patients will be asked about possible side. Also, the score of the BFLUTS questionnaire will be calculated again 3 and 6 months after the treatment. The efficacy of the treatment will be to reduce the number of pads used by patient to 1 or 0. Also, the number of pads used will be examined as a separate variable to determine the total amount of pads used by patient before and after treatment and their differences in general.

Scientific title

Evaluation of the Efficacy and safety of Pulsed Electromagnetic Stimulation on the improvement of urinary symptoms in women with urge incontinence, stress incontinence and mixed (urge/stress) incontinence referred to a private urinary incontinence treatment clinic

Public title

The effect of pulsed electromagnetic stimulation on the improvement of urinary symptoms in women with urinary incontinence

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: At least 21 years of age; ability to read and write; having one of the types of stress; urge or mixed incontinence Exclusion Criteria: Overflow urinary incontinence; acute and severe pelvic infections; severe heart arrhythmia; known psychological disease history; neurological disorders such as stroke; parkinson; epilepsy and MS; current pregnancy; previous surgery for treatment of incontinence; history of pelvic or gynecologic surgery in last 3 weeks or next coming 8 weeks; pelvic organs prolapsed surgery; trauma of pelvis or perineum; neurogenic bladder; previous magnetic stimulation therapy; simultaneous use of alpha adrenergic agonist drugs (terazosin, tamsulosin, doxazosin), diuretics and or using any drugs that exacerbate incontinence; pelvic organs prolapsed (POP); doubt to the bladder fistula; urinary tract infection or hematuria; residual urine volume>200 milliliters

Age

From **21 years** old to **139 years** old

Health conditions studied

1

Description of health condition studied

Urinary incontinence

ICD-10 code

N39.4

ICD-10 code description

Other specified urinary incontinence

Primary outcomes

1

Description

Treatment of urinary incontinence

Timepoint

3 and 6 months after intervention

Method of measurement

Calculate the relevant questions in the BFLUTS standard questionnaire

2

Description

Reducing the number of used pads

Timepoint

3 and 6 months after intervention

Method of measurement

Calculate the relevant questions in the BFLUTS standard questionnaire

Secondary outcomes

empty

Intervention groups

1

Description

Pulse electromagnetic stimulation using a NOVAmag NT-60 device for 6 weeks, a weekly two sessions and each session for 20 minutes

Category

Rehabilitation
