A clinical trial to compare the effectiveness of ibuprofen with low-level laser on acupuncture points in pain reduction after initial archwire placement in orthodontic patient

Protocol summary

Study aim

To compare the effectiveness of ibuprofen with low-level laser on acupuncture points in pain reduction after initial archwire placement in orthodontic patient

Design

Totally, 80 patients whose undergoing orthodontic treatment and referring to Dental Clinic of Mashhad Faculty of Dentistry, Mashhad, Iran. In this single-blind, controlled clinical trial, the patients are assigned into parallel groups using simple sampling methods.

Settings and conduct

Patients whose undergoing orthodontic treatment and referring to Dental Clinic of Mashhad Faculty of Dentistry, are chosen as the participants of the study. In this single-blind study, sealed opaque envelopes will be used to conceal the sequencing. The person responsible for data collection is blind to group allocation and the type of intervention.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Female with aged range 14-30 years; no history of systemic disease; nonuse of analgesic. Exclusion criteria: Having drug intolerance; having gastrointestinal disorders; pregnant and lactating women; having special medical condition.

Intervention groups

Intervention group I will receive 810 nm wavelength laser with 200 mW power for 30 seconds around the 6 points area around the root of tooth after initial archwire placement. Intervention group II will receive 810 nm wavelength laser with 200 mW power for 60 seconds in 5 acupuncture points after initial archwire placement. Intervention group III will receive 400 mg ibuprofen every 8 hours after initial archwire placement. Control group will receive laser off in acupuncture points after initial archwire placement.

Main outcome variables

Evaluation and comparison of the pain rate in chewing, biting, tipping anterior teeth, and put posterior teeth on each other in 2 and 6 hours, as well as 2, 3, 5 and 7 days after the intervention in the three intervention and control groups.

Sample size

Target sample size: **80**

Randomization (investigator's opinion)

Randomized

Randomization description

The subjects will be randomly assigned into three groups of 20 patients with blocks of 2, 4, 6 and 8 using randomization method. A noninvolved researcher will determine the random assignment sequencing in sampling using a statistical analysis system (SAS), computer software. Accordingly, the participants were given codes and assigned into the three intervention and control groups.

Blinding (investigator's opinion)

Single blinded

Blinding description

Patients whose undergoing orthodontic treatment and referring to Dental Clinic of Mashhad Faculty of Dentistry, are chosen as the participants of the study. In this single-blind study, sealed opaque envelopes will be used to conceal the sequencing. The person responsible for data collection is blind to group allocation and the type of intervention.

Description of health condition studied

Orthodontic

ICD-10 code

Z46.4

ICD-10 code description

Fitting and adjustment of orthodontic device

Primary outcomes

1

Description

The pain rate in chewing

Timepoint

2 and 6 hours, as well as 2, 3, 5 and 7 days after the intervention

Method of measurement

Visual Analogue Scale (VAS)

2

Description

The pain rate in biting

Timepoint

2 and 6 hours, as well as 2, 3, 5 and 7 days after the intervention

Method of measurement

Visual Analogue Scale (VAS)

3

Description
The pain rate when tipping anterior teeth
Timepoint
2 and 6 hours, as well as 2, 3, 5 and 7 days after the intervention
Method of measurement
Visual Analogue Scale (VAS)

4

Description
The pain rate when put posterior teeth on each other
Timepoint
2 and 6 hours, as well as 2, 3, 5 and 7 days after the intervention
Method of measurement
Visual Analogue Scale (VAS)

Secondary outcomes

empty

Title and more details about the data/document
The total data to be included are the primary and secondary effects to be shared.
When the data will become available and for how long
6 months after printing results
To whom data/document is available
Our data will only be available to researchers working in science center and university.
Under which criteria data/document could be used
Our data will be available for scholars working in science center and university.
From where data/document is obtainable
Melika Hagpanahi provides the analysis code to the applicants via email: melikah750@gmail.com
What processes are involved for a request to access data/document
Applicants can respond to the email of the respondent and receive a response within a week.
