

Clinical Trial Protocol

Iranian Registry of Clinical Trials

18 Jun 2026

To determine the effect of two types of educational interventions including pamphlet and mobile application on traumatic dental injuries on the knowledge and self-reported performance of martial arts athletes aged 11-15 years

Protocol summary

Study aim

Evaluation of the changes in the knowledge, and self-reported practice of 11-15-year-old adolescent athletes' regarding prevention of traumatic dental injuries following to two interventions of educational pamphlet and mobile application

Design

Clinical trial without control group, with two parallel groups, without blinding, randomized, on 92 participants. Random number table and flipping a coin will be used for randomization.

Settings and conduct

Interventions will be performed on adolescent martial arts athletes in Tehran in three phases: baseline, intervention and final, which last for three months. A questionnaire will be used for gathering data on outcomes changes.

Participants/Inclusion and exclusion criteria

Participants are of both sexes. Participants are in age range 11-15. Participants are involved in martial arts. Participants have a smartphone with Android operating system

Intervention groups

Intervention 1: educational pamphlet; Intervention 2: educational application in Android mobile phone. The educational content of both interventions will be similar to each other on the importance of preventing dental injuries and appropriate action when dental injuries occur which will be prepared with colorful pictures and based on the latest scientific evidence. The interventions will be presented to two groups of participants: an educational pamphlet and an Android application. In both groups, 45 days after receiving the intervention, a reminder will be sent to the athletes (the same pamphlet in pamphlet group and sending a notification to mobile phones in application group).

Main outcome variables

Knowledge score changes; self-reported practice score changes

Scientific title

To determine the effect of two types of educational interventions including pamphlet and mobile application on traumatic dental injuries on the knowledge and self-reported performance of martial arts athletes aged 11-15 years

Public title

Effect of education on prevention of traumatic dental injuries

Purpose

Prevention

Inclusion/Exclusion criteria

Inclusion criteria:

The participant should practice in one of the martial arts
The age of the athlete was between 11 - 15 years old
The athlete or his/her parents have satisfied with participating in the study
The athlete or his/her parents have a cellphone with Android system

Exclusion criteria:

Age

From **11 years** old to **15 years** old

Gender

Both

Phase

N/A

Groups that have been masked

No information

Sample size

Target sample size: **92**

Randomization (investigator's opinion)

Randomized

Randomization description

From the list of martial arts clubs provided by the Sports Medicine Federation, two clubs with athletes of both sexes will be randomly selected as clusters using a random number table. From the list of athletes in each club and based on the gender, two strata will be defined. Using a table of random numbers, 23 boys and 23 girls (46 people in total) will be selected. The allocation of intervention to these two clubs will be done randomly by flipping a coin; so that one club will receive an educational pamphlet and the other club will receive an educational application.

Blinding (investigator's opinion)

Not blinded

Health conditions studied

1

Description of health condition studied

Traumatic dental injuries

ICD-10 code

S02.5

ICD-10 code description

Fracture of tooth (traumatic)

Primary outcomes

1

Description

changes in knowledge score gained by questionnaire

Timepoint

Measuring knowledge score at the baseline (before intervention) and three months after intervention

Method of measurement

Based on scores obtained from knowledge questions in the standardized questionnaire for assessing athletes' knowledge about traumatic dental injuries

2

Description

changes in self-reported practice score gained by questionnaire

Timepoint

Measuring self-reported practice score at the baseline (before intervention) and three months after intervention

Method of measurement

Based on scores obtained from self-reported practice questions in the standardized questionnaire for assessing

athletes' self-reported practice about traumatic dental injuries

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group 1: An educational colorful pamphlet on prevention of Traumatic Dental Injuries (TDIs) will be designed based on the latest evidence and scientific guidelines. This pamphlet provides information for athletes in two parts: 1- preventive measurements on TDIs in sports including mouth guard usage and different types of this appliance, and 2- proper TDIs' management after occurrence including soft tissue damage, crown fracture, tooth luxation, tooth avulsion, and alveolar bone damage. At baseline and after collecting filled out questionnaires by participants, the educational pamphlet will be distributed among participants in pamphlet group. The pamphlets will remain with the athletes. A month and a half after the first pamphlet, the same pamphlet will be sent again to the athletes as a reminder.

Category

Prevention

2

Description

Intervention group 2: An educational application on prevention of Traumatic Dental Injuries (TDIs) in Android operating system, will be designed based on the latest evidence and scientific guidelines with similar content to the pamphlet. As same as pamphlet, the application provides information for athletes in two parts: 1- preventive measurements on TDIs in sports including mouth guard usage and different types of this appliance, and 2- proper TDIs' management after occurrence including soft tissue damage, crown fracture, tooth luxation, tooth avulsion, and alveolar bone damage. At baseline, after collecting filled out questionnaire by participants, the link to access the application in Miket, the Iranian application market, will be sent to the athletes via WhatsApp. Athletes will be asked to contact one of the study researchers if they have problems in installing or using the app. A month and a half after sending the link, a notification designed in the app will be sent to athletes as a reminder .
